## SERVICE MANUAL

Ver 1.0 2001.05  
With SUPPLEMENT-1  
(9-959-215-86)

*US Model  
Canadian Model  
AEP Model  
UK Model  
E Model  
Australian Model  
Tourist Model*

Model Name Using Similer Mechanism	NEW
MD Mechanism Type	MT-MZE2-110
Optical Pick-up Type	KMS-200A

### SPECIFICATIONS

#### System

Audio playing system  
MiniDisc digital audio system

Laser diode properties  
Material: GaAlAs  
Wavelength:  $\lambda = 780 \text{ nm}$   
Emission duration: continuous  
Laser output: less than  $44.6 \mu\text{W}$   
(This output is the value measured at a distance of 200 mm from the lens surface on the optical pick-up block.)

Revolutions  
400 rpm to 900 rpm (CLV)

Error correction  
Advanced Cross Interleave Reed Solomon Code (ACIRC)

Sampling frequency  
44.1 kHz

Coding  
Adaptive Transform Acoustic Coding (ATRAC)

Modulation system  
EFM (Eight to Fourteen Modulation)

Number of channels  
2 stereo channels

Frequency response  
20 to 20,000 Hz  $\pm 1/2 \text{ dB}$

Wow and Flutter  
Below measurable limit

#### Output

	Jack Type	Rated Output	Maximum Output Level	Load Impedance
Headphones	Stereo mini-jack	—	5 mW + 5 mW	16 ohm

#### General

Power requirements

- LIP-10 Rechargeable Battery (Lithium-ion Battery Pack, supplied)
- Three size AA (R6) batteries (not supplied)
- Sony AC Power Adaptor (supplied) connected at the DC IN 6V jack:
  - 120 V AC, 60 Hz (US model)
  - 240 V AC, 50 Hz (UK and Australian models)

Battery operation time  
120 minutes of consecutive playback with fully charged LIP-10

Dimensions  
Approx. 106.8 × 18.5 × 74 mm (w/h/d) (4<sup>1</sup>/<sub>4</sub> × 3<sup>3</sup>/<sub>4</sub> × 3 in.)

Mass  
Approx. 205 g (7.2 oz) incl. rechargeable battery

## Accessories

### Optional

- LIP-10 Lithium-ion Battery Pack
- ACP-MZ60A AC Power Adaptor/Battery Charger
- CPM-MZE2K Car Mount Kit
- CPA-8 Car Connecting Pack
- MDR-D55, MDR-D77 Stereo Headphones
- SRS-58 Sony Active Speakers
- CK-MD4 MiniDisc Carrying Case
- CK-MD10 MiniDisc Filing Box

Your dealer may not handle some of the above listed accessories. Please ask the dealer for detailed information about the accessories in your country.

US and foreign patents licensed from Dolby Laboratories Licensing Corporation.

Design and specifications are subject to change without notice.

### Note

This appliance conforms with EEC Directive 89/336/EEC regarding interference suppression.

### For Customers in Europe

This MiniDisc Recorder is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT label is located on the bottom exterior.

### For Customers in Canada

This apparatus complies with the Class B limits for radio noise emissions set out in Radio Interference Regulations.

### For Customers in the United Kingdom

This MiniDisc Recorder is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT label is located on the bottom exterior.

The built-in battery should be replaced by qualified personnel only.

### For Customers in Australia

If the supply cord of AC power adaptor is damaged the AC power adaptor must be returned to the manufacturer or his agent for the cord to be replaced.

IN NO EVENT SHALL SELLER BE LIABLE FOR ANY DIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE, OR LOSSES OR EXPENSES RESULTING FROM ANY DEFECTIVE PRODUCT OR THE USE OF ANY PRODUCT.

"MD WALKMAN" is a trademark of Sony Corporation.

### Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

### Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270 °C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

### SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY MARK  $\Delta$  OR DOTTED LINE WITH MARK  $\Delta$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

### ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE  $\Delta$  SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

# SECTION 1 GENERAL

This section is extracted from instruction manual.

## Looking at the controls

See pages in ( ) for more details.

### The player

- 1 **II (pause) button (14)**
- 2 **■ (stop) button (8, 14)**
- 3 **DC IN 6 V jack (7, 9, 10, 12, 20)**  
Connect the supplied AC power adaptor here.
- 4 **VOL (volume) +/- button (8, 13)**
- 5 **HOLD (17)**  
Slide to lock the controls of the player.
- 6 **OPR (operate)/CHG (charge) lamp (10)**  
Lights up while the player is operating or flashes while charging the rechargeable battery.
- 7 **AVLS (Automatic Volume Limiter System) (18)**  
Slide to ON to limit the maximum volume
- 8 **BASS BOOST (17)**  
Select to emphasize low frequency (bass) sounds.
- 9 **▶ (play) button (8, 13)**
- 10 **🎧 (headphones, remote) jack (8, 13)**
- 11 **OPEN (8, 13)**  
Slide here to open the lid and insert or remove an MD.
- 12 **◀/▶ (search, AMS) buttons (14)**
- 13 **Rechargeable battery compartment (10)**

For your information | 29

### Looking at the controls

### The remote controller

- 1 **Microplug (6)**
- 2 **II (pause) button (14)**
- 3 **■ (stop) button (8, 14)**
- 4 **VOL (volume) +/- buttons (8, 13)**
- 5 **▶ (play)/◀/▶ (search, AMS) button (14)**  
While the player isn't operating, press ▶ to play. While playing, press the ◀ side to find the beginning of the current or preceding tracks or search backward, or press the ▶ side to find the beginning of the succeeding tracks or search forward
- 6 **PLAY MODE (16)**  
Each time you press here the player plays the MD in different play modes: normal play, all repeat, single repeat, or shuffle repeat
- 7 **HOLD (17)**  
Slide to lock the controls of the remote controller
- 8 **DISPLAY (18)**  
Press to display the current play mode, the track name, or the disc name

30 | For your information

### The display window

- 1 **Character information display (13, 19)**  
Displays the disc and track names, elapsed time of the track, etc.
- 2 **Track number indication (13, 19)**
- 3 **Play mode indication (16)**  
Shows the play modes of the MD.
- 4 **Battery indication (11, 12)**  
Shows battery condition
- 5 **Pause indication**
- 6 **Operation indication (13)**  
Lights up while playing the MD. Flashes while searching or finding the beginning of a track.

For your information | 31

## Let's Start!

Start playing a MiniDisc (MD) using your MD player and the supplied accessories.

### Unpacking

Use the following accessories to start the operation on the next two pages.

6 Let's Start!

### Listening to an MD

8 Let's Start!

### Getting started

Let's Start! 7

### Choosing power sources

The player is operable on AC, rechargeable battery, and dry battery power.

#### Using on AC power

Connect the supplied AC power adaptor to the DC IN 6V jack of the player and the wall outlet.

#### Note on the AC power adaptor

Use the supplied AC power adaptor only. Do not use any other AC power adaptor.

Polarity of the plug

#### Notes on the batteries

Incorrect battery usage may lead to leakage of battery fluid or bursting batteries. To prevent such accidents, observe the following precautions:

- Install the ⊕ and ⊖ poles of the batteries correctly.
- Do not install new and used batteries or different kinds of batteries together.
- Do not try to recharge the batteries.
- When the player is not to be used for a long time, be sure to remove the batteries.
- If a battery leak should develop, carefully and thoroughly wipe away battery fluid from the battery compartment before inserting new ones.

Setting up 9

⇒ Choosing power sources

**Using on the rechargeable battery**

Before using the supplied rechargeable battery for the first time, you must charge it. The battery can be recharged about 300 times.

**1 Connect the supplied AC power adaptor.**

**2 Open the battery compartment lid and insert the battery.**

When you insert the battery, place its end with a groove in the direction of the player.

The OPR/CHG lamp flashes and charging begins. When charging is over, the lamp goes out.

Charging a completely discharged battery takes:  
about 3 hours for 80% charging, or  
about 5 hours for 100% charging.  
Charging goes on while you are using the player.

**3 Disconnect the AC power adaptor.**

As long as the player is connected to the AC power, the power will be supplied from AC.

**Notes on recharging**

- Be sure to use the supplied AC power adaptor.
- When you use the battery for the first time or after a long period of disuse, the battery life may be diminished. In this case, charge and discharge the battery several times. The battery life will be restored.

**Notes on the rechargeable battery**

- To charge the battery, use only the player or the specified charger.
- Do not disassemble or short-circuit the battery.
- Do not leave the battery at high temperature for an extended period of time.
- Keep the battery away from the fire.
- Do not expose the battery to water.
- Do not drop the battery or subject it to mechanical shock.

☞ You can check the charging condition in the display on a remote controller.

Connect the remote controller to the player. While charging, the battery indication appears in the display as follows.

☞ Battery charging tips

- You can charge the battery at any time. The rechargeable battery does not need discharging before recharging. You can recharge a half-charged battery. However, the rechargeable battery discharges little by little even while it is not in use. We recommend that you charge it before every use.
- Keep a few spare batteries. To avoid power shortage, prepare a few rechargeable batteries LIP-10 (not supplied).
- To ensure the maximum number of chargings and dischargings, we recommend storing the battery in a cool place and charging it under temperatures ranging from 50° to 86°F (10° to 30°C). When the battery is not to be used for a long time, be sure to remove it from the player.

⇒ Choosing power sources

**Using on dry batteries**

**1 Mount the battery case.**

Fitting the hooks of the battery case to the side of the player, attach the case with a screw (supplied). Then, connect the plug to the DC IN 6V jack.

**2 Install three size AA (R6) alkaline batteries.**

☞ When to replace the batteries

You can check the battery condition with the battery indication displayed while using the player.

☞ Battery life\*

Batteries	Playback
Rechargeable batteries**	Approx. 2 hours
Size AA (R6) alkaline batteries	Approx. 4 hours
Rechargeable and size AA (R6) batteries	Approx. 7.5 hours

- \* The battery life may be diminished due to operating condition and the temperature of the location.
- \*\* If the rechargeable battery capacity becomes half the normal life, replace it with a new one.

**Playing an MD**

**1 Connect the headphones at ①.**

**2 Insert an MD.**

Slide OPEN to open the lid, insert an MD with the label side up and the arrow pointing toward the opening, and close the lid. Once you open the lid, the player will start playing from the beginning of the first track.

\* No indication appears with MDs that have not been electronically labeled.

**3 Press ►.**

The player will play from the beginning of the first track.

\* No indication appears with MDs that have not been electronically labeled.

⇨Playing an MD

**4 Adjust the volume by pressing the + side or the - side of VOL +/- button.**

**Note**

If you cannot increase the volume, the AVLS switch on the player is set to ON. Set the switch to OFF. When you try to increase the volume while the switch is set to ON, the volume indication flashes and you cannot increase the volume to the maximum. (See *Useful tips on playing an MD* on page 18.)

To	Press	Beep on the headphones (when operating on the remote controller)
pause/release pause	⏸	---- (continuous short beep)
stop	■	-- (one long beep)
search while listening	keep pressing ⏮/⏭	(none)
quickly search without listening	⏸ (pause) and keep pressing ⏮/⏭	(none)
find the beginning of the current or preceding tracks (AMS)	slightly press ⏮	--- (three short beeps)
find the beginning of the next or succeeding tracks (AMS)	slightly press ⏭	-- (two short beeps)
eject the MD	after ■ (stop), slide OPEN and open the lid	(none)

**Playing tracks repeatedly**

You can play tracks repeatedly in three ways—all repeat, single repeat, and shuffle repeat.

Press **PLAY MODE** on the remote controller while the MD is playing.

Each time you press PLAY MODE, the play mode indication changes as follows.

To play	Indication
all the tracks once (normal play)	(none)
all the tracks repeatedly (all repeat)	↻
a single track repeatedly (single repeat)	↻ 1
all the tracks in random order repeatedly (shuffle repeat)	↻ SHUF

**Playing specific tracks**

You can find a specific track before playing an MD and start playing from that track. For this operation, only the controls on the player can be used.

**1 Press ⏮ or ⏭ on the player to find a specific track.**

**2 Press ▶ on the player.**

**Notes**

- This player has a shock-resistant memory. However, if it is subject to continuous vibration, the sound may skip or mute while playing an MD. In this case, use the player in a stable place.
- Tracks that are very short, such as a brief narration or introduction, may cause the sound to skip while being played.

**You can resume playing from the point the MD stopped (Resume function).**

If you stop playing partway and do not eject the MD nor open the lid, the player will resume playing from the point where the MD stopped. Once you open the lid, the player will start playing from the beginning of the first track when you press ▶.

**Useful tips on playing an MD**

**Locking the controls (Hold function)**

To prevent the buttons from being accidentally operated while you are walking, use the Hold function.

**Slide HOLD in the direction of the arrow.**

On the player, slide HOLD to lock the controls of the player. On the remote controller, slide HOLD to lock the controls of the remote controller.

**Emphasizing the bass (Bass Boost feature)**

The Bass Boost feature intensifies low frequency sound for richer bass reproduction.

**While the MD is playing, set BASS BOOST to MID (middle) or MAX (maximum).**

To emphasize the bass slightly, set to MID. To emphasize the bass strongly, set to MAX. For normal play, set to NORM.

**Note**

If the volume is too high, the sound may crack or distort. If this happens, turn down the volume.

⇒ Useful tips on playing an MD

**Adjusting the sound to an appropriate level (AVLS function)**

The AVLS (Automatic Volume Limiter System) function allows you to limit the maximum volume of the player without degrading the sound quality.

Hearing experts advise against continuous, loud and extended play. Use the AVLS function to avoid excessive pressure to your ears.

**Set AVLS on the player to ON.**

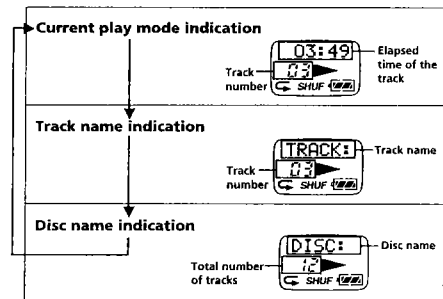

The volume is kept at a moderate level without degradation of the sound quality, even if you attempt to turn the volume up higher.

**Displaying disc and track names**

If you are playing a premastered or recorded MD that has been electronically labeled, you can display information on the MD while it is playing.

**While the MD is playing, press DISPLAY.**

Each time you press the button, the display changes as follows.

**Notes**

- No character information appears with MDs that have not been electronically labeled
- This player does not label or copy any character information such as disc names and track names.

**Using in a car**

**Hooking up a car stereo system**

You can listen to MDs with your car stereo system using the following equipment.

–Car Mount Kit CPM-MZE2K (not supplied, contents: Car mount unit, Car connecting pack, Car battery cord)

Refer to the operating manual of the equipment for more details.

**Note**

Do not put the player on a dashboard or leave it in a car parked in direct sunlight since the temperature may rise excessively.

## SECTION 2 DISASSEMBLY

**Note :** Follow the disassembly procedure in the numerical order given.

### 2-1. MAIN BOARD AND SLED MOTOR

① Remove the bottom panel assembly.

### 2-2. SPINDLE MOTOR

① Remove the bottom panel assembly and main board.

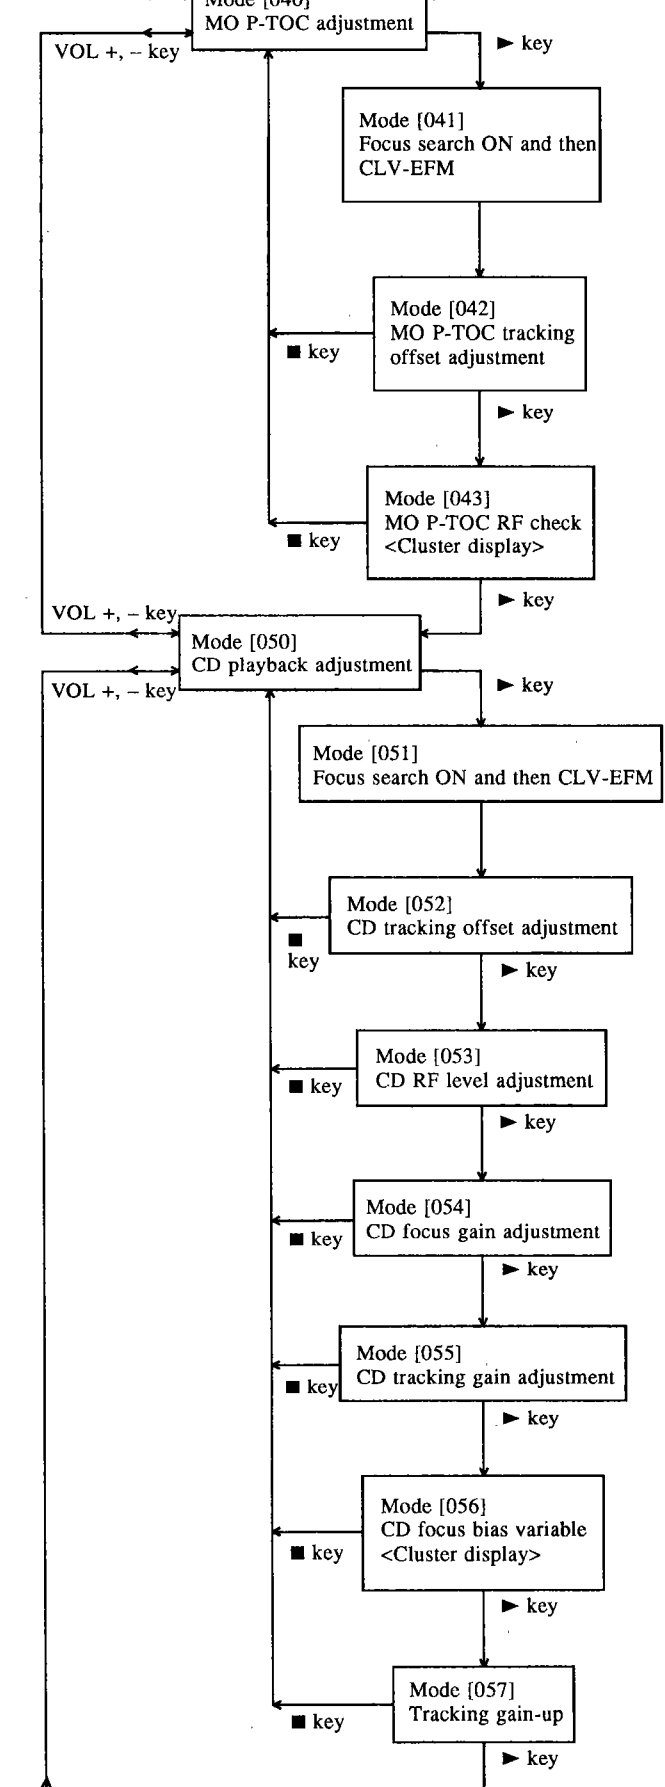

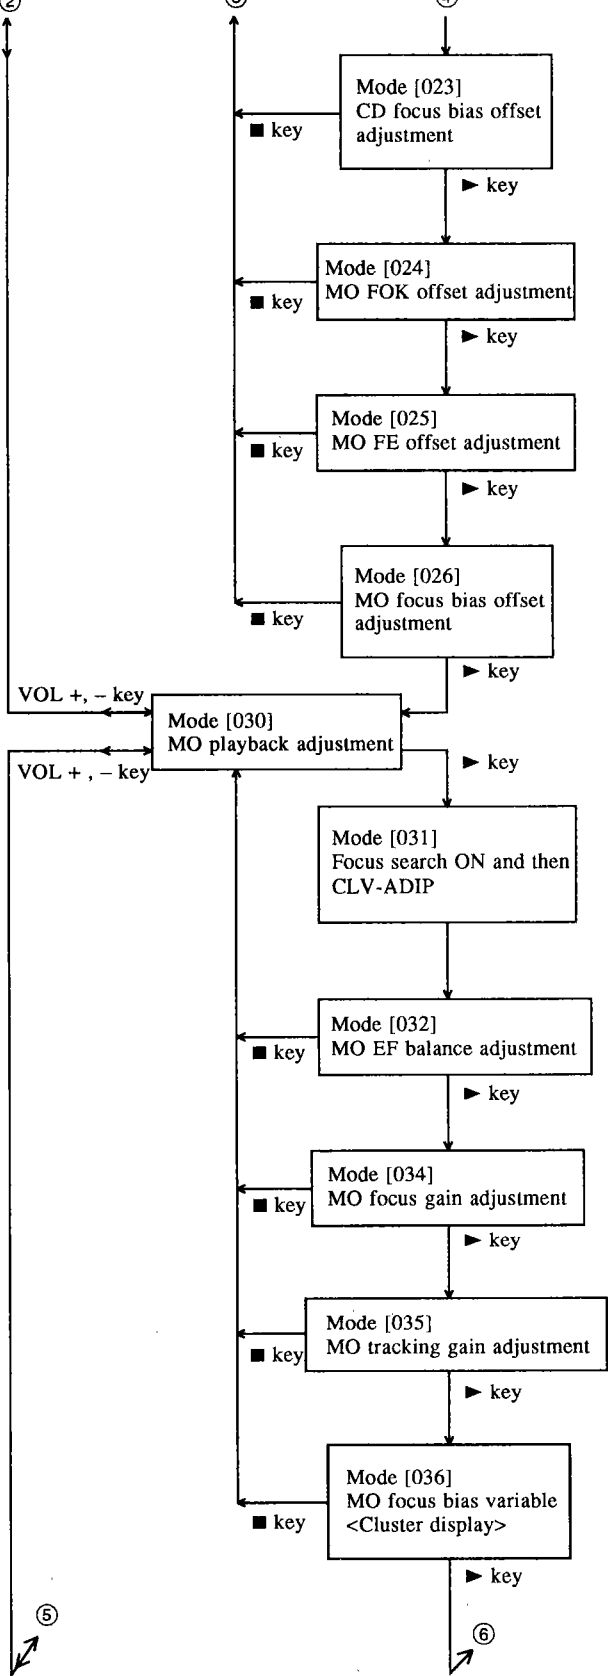

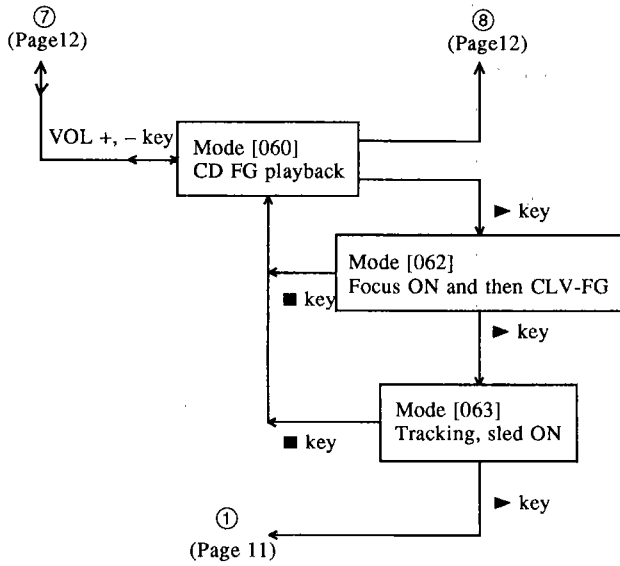

## 2-3. OPTICAL PICK-UP (KMS-200A)

- 1 Remove the optical pick-up flexible board from the CN501 on the main board, and open the main board.

- Press the **||** key. The adjustment data written in the EEPROM will be rewritten.  
(The adjustment value will lights up.)

**Note :** The adjustment data will not be rewritten if the **||** key is not pressed and the original data will remain.

- Press the VOL +, - key again and set the adjustment mode again.

**• Adjustment Method**

- Press the VOL +, - key and **▶** key, and set the adjustment mode.  
(The values written in the EEPROM will be displayed blinking.)

- Press the VOL +, - key and change the adjustment value.  
(The adjustment value changes and blinks.)

**• Cluster Display**

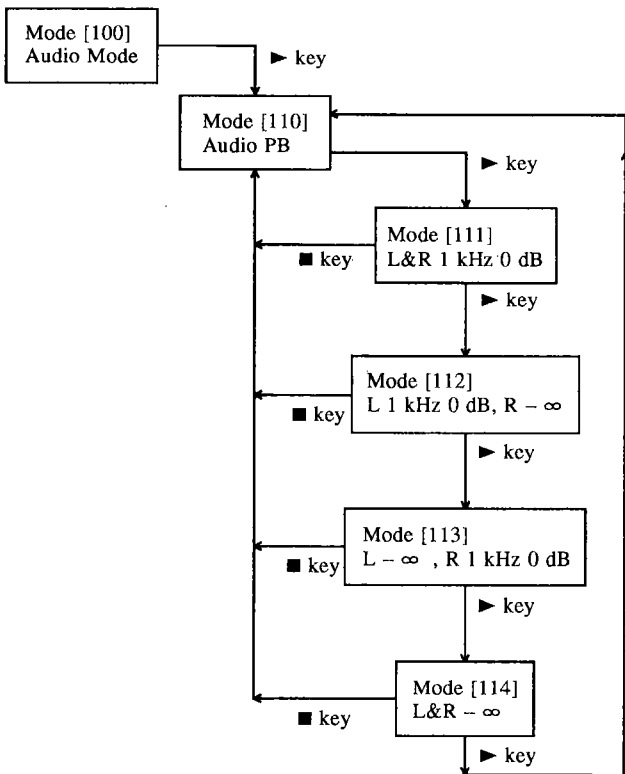

Mode No.	Mode	Dot Area Display
036	MO playback focus bias variable	<Cluster Value> <Adjustment Value>
043	MO P-TOC RF check	<Cluster Value> <Adjustment Value>
056	CD palyback focus bias variable	<Cluster Value> <Adjustment Value>

## AUDIO MODE

- To set the audio mode, set the test mode and set the mode display to 100 using the VOL +, - key.
- To set other modes, press the VOL +, - key.

### • Audio Mode Structure

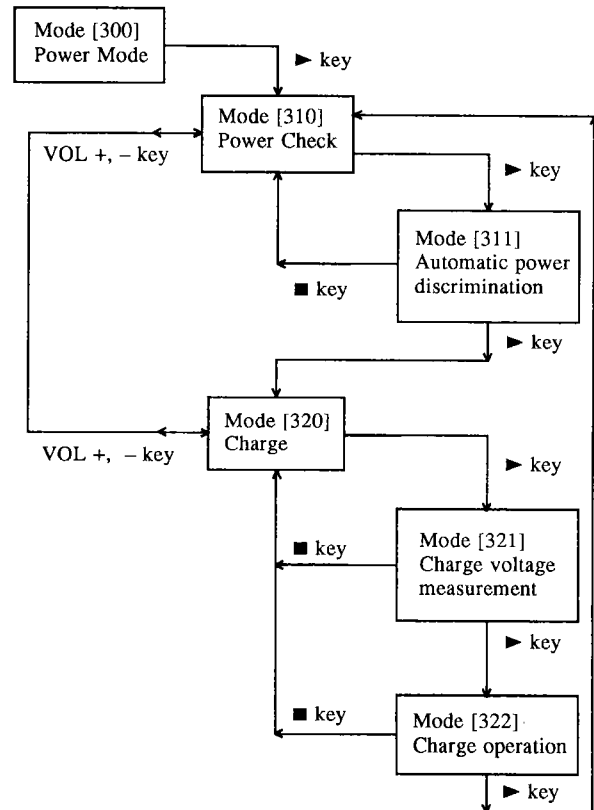

- When the ■ key is pressed when the mode number is [111], [112], or [113], the buzzer (3 kHz) will sound for approximately 1 second. (When the buzzer sounds, it indicates that the Lch and Rch can be muted. The channels can also be switched even if the ■ key is not pressed.)
- When the VOL +, - key is pressed when the mode number is [111], [112], or [113], the headphones output volume will move up and down. When the ◀◀ or ▶▶ key is pressed, the headphones output volume will become minimum and maximum.

## POWER MODE

- To set the power mode, set the test mode and set the mode display to 300 using the VOL +, - key.
- To set other modes, press the VOL +, - key.

### • Power Mode Structure

- OPR/CHG LED will light up in mode number [322].

## OTHER DISPLAYS

- During the test mode, the displays shown for the detection switch of the disc are as follows.

	Segment Area Display
Disc low reflectance rate detection	↻
Disc present/absent detection	SHUF

## SECTION 4

### ELECTRICAL ADJUSTMENTS

#### LASER DIODE EMISSION CHECKING PRECAUTIONS

When checking the laser diode emission during adjustments, never check it from directly above as this can be blinding.

#### MINI DISC DEVICE (KMS-200A) USING PRECAUTIONS

As the laser diode in the optical pick-up is easily damaged by static electricity, make a solder bridge on the laser tap of the flexible board when using it. Also carry out thorough anti-static electricity measures. Handle the flexible board carefully as it damages easily.

#### ADJUSTING PRECAUTIONS

- 1) To perform adjustments, set the test mode.
- 2) After completing adjustments, exit the test mode.
- 3) Use the following jigs and measurement tools.
  - CD test disc TDYS-1 (Parts No. : 4-963-646-01)
  - SONY MO disc available on the market.
  - LPM-8001 laser power meter (Parts No. : J-2501-046-A)
  - MDPE-1 error rate counter (Parts No. : J-2501-047-A)
  - Oscilloscope (Above 40 MHz band. Measure after calibrating the probe.)
  - Digital voltmeter
  - Thermometer
- 4) Unless specified otherwise, supply a power of DC6V to the DC IN 6V jack.
- 5) Positions of switch and knob
  - HOLD switch...OFF (Opposite  $\blacktriangleright$ )
  - AVLS switch...OFF
  - BASS BOOST switch...NORM

#### 3.5V VOLTAGE ADJUSTMENT

Connection :

#### Adjusting Method :

1. Set the power mode of the test mode (Mode display : 300).
2. Press the  $\blacktriangleright$  key and set the power check mode (Mode display : 310).
3. Press the  $\blacktriangleright$  key and set the automatic power discrimination mode (Mode display : 311).
4. Adjust RV901 of the main board so that the voltage of AP315 (3.5V) becomes  $3.5 \pm 0.05V$ .
5. Release the test mode.

#### CHARGE VOLTAGE ADJUSTMENT

Connection :

#### Adjusting Method :

1. Set the power mode of the test mode (Mode display : 300).
2. Press the  $\blacktriangleright$  key and VOL + key, and set the charge mode (Mode display : 320).
3. Check that the OPR/CHG LED (D905) is off.
4. Press the  $\blacktriangleright$  key (twice), and set the charge operation mode (Mode display : 322).
5. Check that the OPR/CHG LED (D905) is lit.
6. Adjust RV902 of the main board so that the voltage between AP8101 (LI+) and AP8105 (LI-) becomes  $4.25 \pm 0.05V$ .
7. Release the test mode.

## LASER POWER ADJUSTMENT

Connection :

### Adjusting method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and set the laser power adjustment mode (Mode display : 010).
3. Press the ◀◀ key and move the optical pick-up to the innermost periphery.
4. Open the lid and set the laser power meter above the optical pick-up objective lens.
5. Press the ► key and set the laser CD read adjustment mode (Mode display : 011).
6. Check that the laser power meter reads  $0.4 \pm 0.1$  mW.
7. Press the ► key and set the laser MO read adjustment mode (Mode display : 013).
8. Press the VOL +, - key so that the laser power meter reads  $0.85 \pm 0.05$  mW.
9. Press the || key and fix the adjustment data.
10. Check that the voltage between AP126 (LDI0) and AP127 (LDI1) is below 350 mV.
11. Press the ► key and set the temperature compensation adjustment mode (Mode display : 014).
12. Measure the temperature of the periphery of the main board using the thermometer.
13. Press the VOL +, - key so that the value measured shown at the LCD segment of the headphone remote controller becomes the measured value  $\pm 1$ .
14. Press the || key and fix the adjustment data.
15. Release the test mode.

## OFFSET ADJUSTMENT

Connection :

### Adjusting Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL +, and set the offset adjustment mode (Mode display : 020).
3. Press the ► key and set the CD FOK offset adjustment mode (Mode display : 021).
4. Press the VOL +, - key so that the voltage between AP5030 (ABCD) and AP101 (VC) becomes  $0 \pm 50$  mV.
5. Press the || key and fix the adjustment data.
6. Press the ► key and set the CD FE offset adjustment mode (Mode display : 022).
7. Press the VOL +, - key so that the voltage between AP5070 (FE) and AP101 (VC) becomes  $0 \pm 50$  mV.
8. Press the || key and fix the adjustment data.
9. Press the ► key and set the CD focus bias offset adjustment mode (Mode display : 023).
10. Press the VOL +, - key so that the voltage between AP5070 (FE) and AP101 (VC) becomes  $0 \pm 50$  mV.
11. Press the || key and fix the adjustment data.
12. Press the ► key and set the MO FOK offset adjustment mode (Mode display : 024).
13. Press the VOL +, - key so that the voltage between AP5030 (ABCD) and AP101 (VC) becomes  $0 \pm 50$  mV.
14. Press the || key and fix the adjustment data.
15. Press the ► key and set the MO FE offset adjustment mode (Mode display : 025).
16. Press the VOL +, - key so that the voltage between AP5070 (FE) and AP101 (VC) becomes  $0 \pm 50$  mV.
17. Press the || key and fix the adjustment data.
18. Press the ► key and set the MO focus bias offset adjustment mode (Mode display : 026).
19. Press the VOL +, - key so that the voltage between AP5070 (FE) and AP101 (VC) becomes  $150 \pm 50$  mV.
20. Press the || key and fix the adjustment data.
21. Release the test mode.

## MO TRAVERSE ADJUSTMENT

Connection :

### Adjusting Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (twice), and set the MO playback adjustment mode (Mode display : 030).
3. Press the ►| or |◀◀ key and move the optical pick-up near the center.
4. Insert a MO disc. (Any available on the market.)
5. Press the ► key and after the focus search turns on, set the CLV ADIP mode (Mode display : 031). (After the focus is turned on, the MO EF balance adjustment mode is set (Mode display : 032).)
6. Press the VOL +, - key so that the traverse waveform of AP5060 (TE) becomes symmetrical in respect to 0V.

(Traverse Waveform)

Specification : A=B, C ≥ 2.0 Vp-p

7. Press the ■ key and fix the adjustment data.
8. Check that this traverse level is above 2.0 Vp-p.
9. Press the ■ key.
10. Release the test mode.

## MO P-TOC TRAVERSE ADJUSTMENT

Connection :

### Adjusting Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (three times), and set the MO P-TOC adjustment mode (Mode display : 040).
3. Insert a MO disc. (Any available on the market.)
4. Press the ► key and after the focus search turns on, set the CLV EFM mode (Mode display : 041). (After the focus is turned on, the MO P-TOC tracking offset adjustment mode is set (Mode display : 042).)
5. Press the VOL +, - key so that the traverse waveform of AP5060 (TE) becomes symmetrical in respect to 0V.

(Traverse Waveform)

Specification : A=B, C ≥ 2.0 Vp-p

6. Press the ■ key and fix the adjustment data.
7. Check that the traverse level is above 2.0 Vp-p.
8. Press the ■ key.
9. Release the test mode.

## MO ERROR RATE CHECK

Connection :

### Checking Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (twice), and set the MO playback adjustment mode (Mode display : 030).
3. Press the ►| or |◀◀ key and move the optical pick-up near the center.
4. Insert a PTDM-1 disc that has been continuously recorded.
5. Press the ► key (three times), and set the MO focus bias variable mode (Mode display : 036).
6. Check that the error rate (C1) shown on the error rate counter is below 100 and there is no compensation (C2).
7. Press the ■ key.
8. Release the test mode.

## CD TRAVERSE ADJUSTMENT

### Connection :

### Adjusting Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (four times), and set the CD playback adjustment mode (Mode display : 050).
3. Press the ►► or ◀◀ key and move the optical pick-up near the center.
4. Insert the CD test disc (TDYS-1).
5. Press the ► key and after the focus search turns on, set the CLV EFM mode (Mode display : 051). (After the focus is turned on, the CD tracking offset adjustment mode will be set (Mode display : 052).)
6. Press the VOL +, - key so that the traverse waveform of AP5060 (TE) becomes symmetrical in respect to 0V.

### (Traverse Waveform)

7. Press the ■ key and fix the adjustment data.
8. Check that this traverse level is above 2.0 Vp-p.
9. Press the ■ key.
10. Release the test mode.

## CD RF LEVEL ADJUSTMENT

### Connection :

### Adjusting Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (four times), and set the CD playback adjustment mode (Mode display : 050).
3. Press the ►► or ◀◀ key and move the optical pick-up near the center.
4. Insert the CD test disc (TDYS-1).
5. Press the ► key (twice), and set the CD RF level adjustment mode (Mode display : 053).
6. Press the VOL +, - key so that RF level of AP5020 (RF) becomes  $0.8 \pm 0.1$  Vp-p.

7. Press the ■ key and fix the adjustment data.
8. Check that the voltage between AP126 (LDI0) and AP127 (LDI1) is below 300mV.
9. Press the ■ key.
10. Release the test mode.

## CD ERROR RATE CHECK

### Connection :

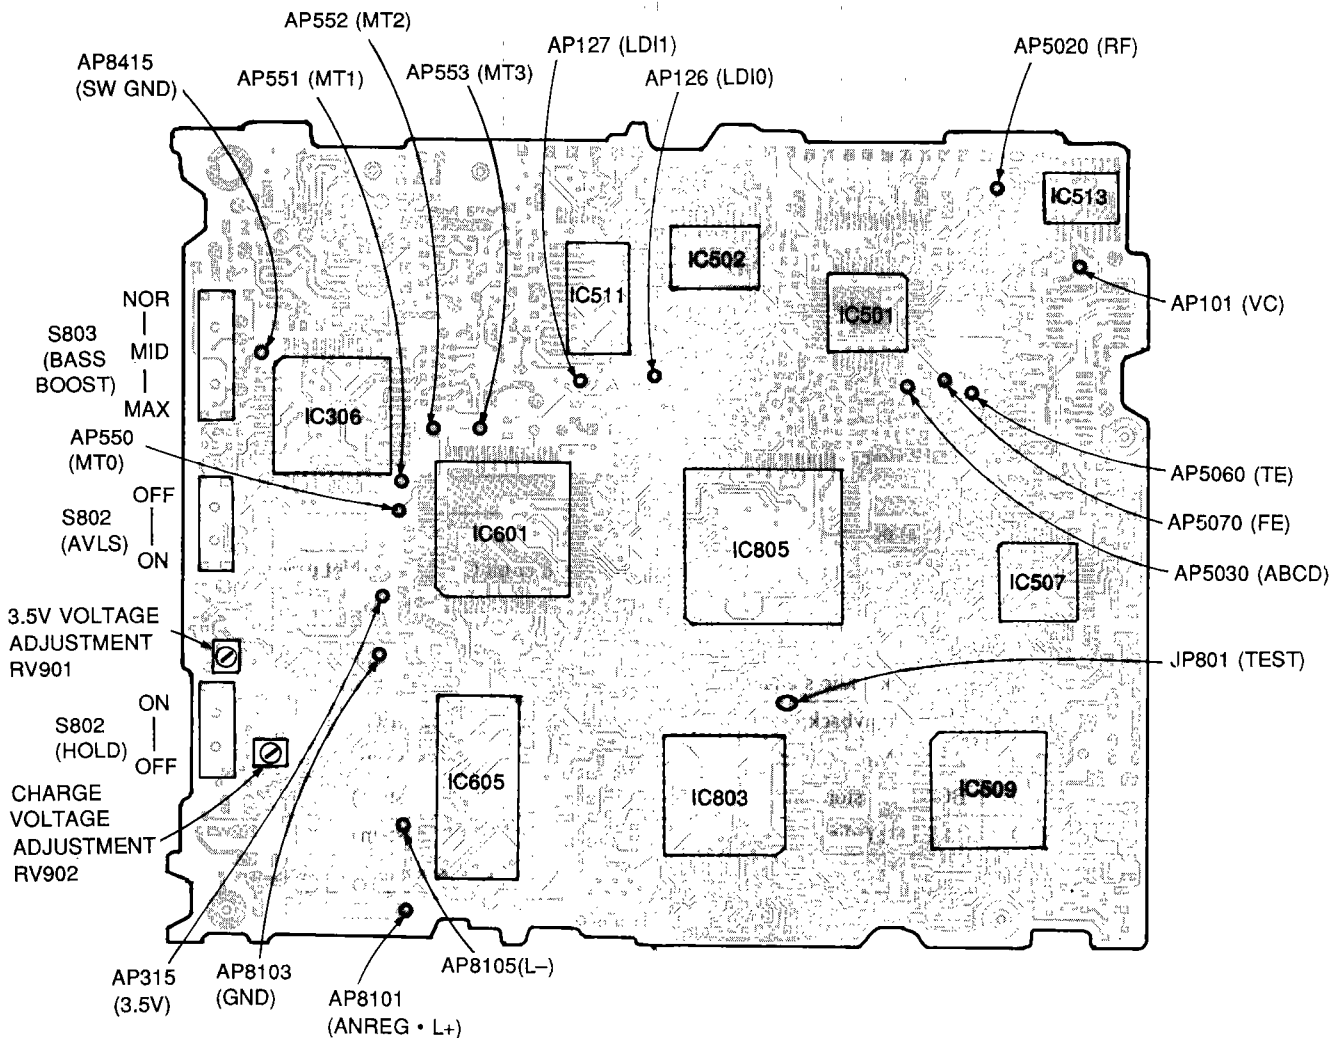

### Checking Method :

1. Set the servo mode of the test mode (Mode display : 000).
2. Press the ► key and VOL + key (four times), and set the CD playback adjustment mode (Mode display : 050).
3. Press the ►► or ◀◀ key and move the optical pick-up near the center.
4. Insert the CD test disc (TDYS-1).
5. Press the ► key (five times) and set the CD focus bias variable mode (Mode display : 056).
6. Check that the error rate (C1) shown on the error rate counter is below 100 and there is no compensation (C2).
7. Press the ■ key.
8. Release the test mode.

## ADJUSTING/CONNECTING POINTS

### Main Board [Side A]

## SECTION 5 DIAGRAMS

### 5-1. IC PIN FUNCTIONS

#### IC601 EFM/ACIR ENCODER/DECODER (CXD2525R-1)

\* (3) represents state output and (A) represents analog output in I/O column.

Pin No.	Signal Name	I/O	Function
1	MDP	O (3)	Spindle motor servo control
2	MDS	O (3)	Spindle motor servo control
3	EFMI	I	Playback EFM input
4	ASY	O	Playback EFM full swing output (Not used)
5	LOCK	O	Spindle servo (CLV) lock monitor. "H": Lock
6	VCOO	O	EFM decoder analog PLL oscillation output (196 Fs=8.6436 MHz) (Not used)
7	VCOI	I	EFM decoder analog PLL oscillation input (196 Fs=8.6436 MHz) (Not used)
8	TEST	I	Test pin. Normally GND
9	PDO	O (3)	EFM decoder analog PLL phase comparison output (Not used)
10	VSS	—	Digital GND
11	EFMO	O	EFM output during recording (Not used)
12	ATER	O	ADIP CRC flag output. "H": Error
13	CNIN	I	Track jump number count signal input (Connected to GND)
14	SENS	O (3)	Internal status output for serial bus address
15	SYPL	I	SQSY, ADSY, DQSY polarity switching input. Active high when "H"
16	FILO	O (A)	Digital PLL master PLL filter output
17	FILI	I	Digital PLL master PLL filter input
18	PCO	O (3)	Digital PLL master PLL phase comparison output
19	AVSS	—	Analog GND
20	CLTV	I	Digital PLL master PLL VCO control voltage input
21	AVDD	—	Analog power supply 3.1V
22	XRST	I	System reset input. Active low
23	REC	I	"L": Decoder, "H": Encoder (Connected to GND)
24	SORS	I	Test pin. Normally GND
25	SCLK	I	Serial bus clock input
26	XLAT	I	Serial bus latch input
27	SWDT	I	Serial bus write data input
28	SRDT	O (3)	Serial bus read data output
29	ADSY	O	ADIP sync output
30	SQSY	O	Subcode Q sync output
31	VDD	—	Digital power supply 3.1V
32	DQSY	O	Subcode Q sync (SCOR) output of digital in U-bit CD format (Not used)
33	MQSY	O	Open
34	DTI	I	Recording audio signal input
35	DTO	O (3)	Playback audio signal output
36	C2PO	O	C2PO: Playback, D. In-VFLAG: Digital REC, 0: Analog REC
37	BCK	O	2.8224 MHz output (MCLK system)
38	XBCK	O	BCK inversion output (MCLK system)
39	LRCK	O	44.1 kHz (=Fs) (MCLK system)
40	WDCK	O	88.2 kHz (MCLK system) (Not used)

Pin No.	Signal Name	I/O	Function
41	FS4	O	176.4 kHz (MCLK system)
42	GTOP	O	"H": Releases sync protection window (INPUT EFM SYNC monitor output) (Not used)
43	XUGFS	O	"L": Unguarded frame sync (INPUT EFM SYNC monitor output) (Not used)
44	XPLCK	O	EFM decoder PLL clock output (98 Fs=4.3218 MHz) (Not used)
45	GFS	O	"H": Frame sync OK (INPUT EFM SYNC monitor output)
46	EPDO	O (3)	EFM encoder external PLL phase comparison output Frequency: Low → "H" (Not used)
47	RFCK	O	7.35 kHz output (MCLK system) (Not used)
48	EVCI	I	EFM encoder external PLL oscillation input (196 Fs=8.6436 MHz) (Connected to GND)
49	EVCO	O	EFM encoder external PLL oscillation output (196 Fs=8.6436 MHz) (Not used)
50	VSS	—	Digital GND
51	MCLK	O	22.579 MHz output
52	XTAI	I	Crystal oscillation input (512 Fs=22.5792 MHz)
53	XTAO	O	Crystal oscillation output (512 Fs=22.5792 MHz) (Not used)
54	XTSL	I	Connected to GND
55	MVCI	I	Digital in PLL oscillation input (512 Fs=22.5792 MHz) (Connected to GND)
56	MVCO	O	Digital in PLL oscillation output (512 Fs=22.5792 MHz) (Not used)
57	EMPH	O	Fixed at "open"
58	DIPD	O (3)	Digital in PLL phase comparison output Frequency: Low → "H" (Not used)
59	RAOF	O	RAM overflow output (decoder monitor output) (Not used)
60	MT3	O	Correction status monitor output during playback
61	MT2	O	Correction status monitor output during playback
62	MT1	O	Correction status monitor output during playback
63	MT0	O	Correction status monitor output during playback
64	WFCK	O	7.35 kHz (EFM decoder PLL system during playback, EFM encoder PLL system during recording) (Not used)
65	DIN	I	Digital audio input (Connected to GND)
66	MD2	I	Digital audio out ON/OFF. "H": ON (Connected to GND)
67	DOUT	O	Digital audio output (Not used)
68	DIDT	O	Audio data output for digital audio input
69	DODT	I	16-bit data input for digital audio output (Connected to GND)
70	DOVF	I	Validity flag input for digital audio (Not used)
71	VDD	—	Digital power supply 3.1V
72	SBOCK	I	Fixed at "L" (Connected to GND)
73	SBODT	O	Fixed at "open" (Not used)
74	SBICK	I	Fixed at "L" (Connected to GND)
75	SBIDT	I	Fixed at "L" (Connected to GND)
76	FMCK	I	ADIP read clock input (6.3 kHz) (TTL Schmidt input)
77	FMDT	I	ADIP data input (TTL schmidt input)
78	ADFG	I	ADIP carrier signal input (20.05 kHz) (TTL schmidt input)
79	FSW	O (3)	Spindle motor output filter switching output. "Z": CLV-P, "L": Others
80	MON	O	Spindle motor ON/OFF control output. "H": ON

- Note:**
- XUGFS is a Frame Sync (negative pulse) created from EFM signal. This signal has not been sync protected.
  - As for XPLCK, PLL is adjusted so that EFM PLL clock inversion and falling edge coincide with its changing point.
  - GFS becomes "H" when Frame Sync coincides with insertion protection timing.
  - C2PO represents data error status.
  - RAOF is generated when 32 kRAM exceeds  $\pm 4F$  jitter margin.

**IC602 SHOCK PROOF MEMORY CONTROLLER (CXD2526AR)**

Pin No.	Signal Name	I/O	Function
1	A16	O	SRAM address bus A16 when RMSL="H", WFOVF when "L" (Note) (Not used)
2	A17	O	SRAM address bus A17 when RMSL="H", WDTM when "L" (Note) (Not used)
3	A18	O	SRAM address bus A18 when RMSL="H", ZERO when "L" (Note) (Not used)
4	A19	O	SRAM address bus A19 when RMSL="H", MDTSC when "L" (Note) (Not used)
5	A20	O	SRAM address bus A20 when RMSL="H", CMPSY when "L" (Note) (Not used)
6	LRCK	I	LRCK input from EFM encoder/decoder
7	BCK	I	BCK input from EFM encoder/decoder
8	C2PO	I	C2PO input from EFM decoder
9	DATA	I/O	Input/output data from decoder during playback and to encoder during recording
10	VSS	-	GND
11	TEST	I	Test pin. Normally GND
12	XRST	I	Reset input. "L": Reset
13	MIN	I	Monitor signal input for external input. Inputs a desired monitor signal
14	SRDT	(HiZ) O	Microprocessor serial data output. "Hi-z" when CXD2526AR read register is not selected
15	SWDT	I	Microprocessor serial data input
16	XSLT	I	Microprocessor serial data latch signal input
17	SCK	I	Microprocessor serial data shift clock input
18	SCTX	I	Data output enable signal input during recording mode (Connected to GND)
19	RCPB	I	"L": Playback mode, "H": Recording mode (Connected to GND)
20	WRMN	I	"H": Write mode, "L": Monitor mode
21	SUB MAIN	I	"H": Records input signal according to SDCT, "L": Records according to DCT
22	XINT	O	Interruption request output. "L" when interruption status occurs
23	MDSY	O	Input data MD sync detection signal
24	MEMFUL	O	"H" when main data area becomes full with data (Connected to 3.1V)
25	MEMEMP	O	"H" when main data area is empty (Connected to 3.1V)
26	UNDER	O	"H" when RMS < THUND (Connected to 3.1V)
27	OVER	O	"H" when RMS $\geq$ THOVR (Connected to 3.1V)
28	ERWR	O	"H" when data which C2PO is effective is written into RAM (Connected to 3.1V)
29	BTOV4	O	"H" when BCT $\geq$ 400 (Hex) (Connected to 3.1V)
30	TXST	O	"H" during data transfer (Connected to 3.1V)
31	VDD	-	System power supply 3.1V
32	BUSY	I/O	"H": RAM access (Connected to 3.1V)
33	ZZ2	I	Test signal. Fixed at "L" (Connected to 3.1V)
34	ZZ1	I	Test signal. Fixed at "L" (Connected to 3.1V)
35	ZZ0	I	Test signal. Fixed at "L" (Connected to 3.1V)
36	XALT	O	Data ready or latch signal to CXD2531BR
37	ADT1	I	Data input from CXD2531BR
38	ADTO	O	Data output to CXD2531BR
39	ACK	O	Data input/output clock output to CXD2531BR
40	AC2	O	Output data C2PO output to CXD2531BR
41	XRQ	I	Data request input signal from CXD2531BR
42	SDCK	I	External sub data I/F shift clock input (Connected to GND)
43	SBDT	I/O	External sub data I/F data output during playback mode, data input during recording mode (Connected to GND)

Pin No.	Signal Name	I/O	Function
44	XWT	O	External sub data I/F wait signal. Clock for reading a new data should not be transferred when "L" (Not used)
45	SRDY	O	External sub data I/F access enable signal. Ignores clock for sub data R/W when "H" (Not used)
46	MCK	O	128 fs output (Not used)
47	F256	O	256 fs output (Not used)
48	XTLO	O	System clock output (22.5792 MHz) (Not used)
49	XTLI	I	System clock input (22.5792 MHz)
50	VSS	-	GND
51	TEST	I	Test pin. Normally GND
52	RMSL	I	External RAM select signal. "H": SRAM, "L": DRAM (Connected to GND)
53	ERR	I/O	EXTC2R="H": C2PO input (Not used)
54	D7	O	SRAM data bus D7 when RMSL="H", Test signal when "L" (Not used)
55	D4	I/O	RAM data bus D4 when RMSL="H", Test signal when "L" (Not used)
56	D0	I/O	RAM data bus D0
57	D1	I/O	RAM data bus D1
58	D3	I/O	RAM data bus D3
59	D2	I/O	RAM data bus D2
60	XCAS	I/O	RMSL="L": DRAM $\overline{\text{CAS}}$ output, "H": Data bus D6
61	XOE	O	RAM output enable
62	A10	O	RAM address bus A10 (Not used)
63	XWE	O	RAM write enable
64	XRAS	I/O	DRAM $\overline{\text{RAS}}$ output when RMSL="L", Data bus D5 when "H"
65	A11	O	RAM address bus A11 (Not used)
66	A9	O	RAM address bus A9
67	A0	O	RAM address bus A0
68	A1	O	RAM address bus A1
69	A2	O	RAM address bus A2
70	A3	O	RAM address bus A3
71	VDD	O	System power supply 3.1V
72	A8	O	RAM address bus A8
73	A7	O	RAM address bus A7
74	A6	O	RAM address bus A6
75	A5	O	RAM address bus A5
76	A4	O	RAM address bus A4
77	A12	O	RAM address bus A12 when RMSL="H", CS output when "L" (Not used)
78	A13	O	RAM address bus A13 when RMSL="H", SYOK output when "L" (Not used)
79	A14	O	SRAM address bus A14 when RMSL="H", WFFUL when "L" (Note) (Not used)
80	A15	O	SRAM address bus A16 when RMSL="H", RFEMP when "L" (Note) (Not used)

**Note:** WFOVF: "H" When write FIFO becomes overflow.  
WDTM: Outputs window timing within DI block.  
ZERO: Outputs "H" when BCT=0.  
MDTSC: "H" when input data header selector becomes 00 to IF, "L" when others.  
CMPSY: Insertion sync timing  
WFFUL: "H" when write FIFO becomes full.  
RFEMP: "H" when read FIFO becomes empty.

**IC803 SUB SYSTEM CONTROL (MB89133A-PFM-170)**

Pin No.	Signal Name	I/O	Function
1	AVCC	—	3.7V
2	$\overline{\text{RST}}$	I	Reset signal
3	MODE0	I	Mode setting (Connected to GND)
4	MODE1	I	
5	X0	I	System clock (4.19 MHz)
6	X1	O	
7	VCC	—	3.1V
8	X0A	I	Time clock (32.768 kHz)
9	X1A	O	
10	CE	—	Open
11	$\overline{\text{MRST}}$	O	Reset signal to main microprocessor
12		O	Not used
13	PCONT	O	DC-DC converter ON/OFF control. "H": ON
14	CHG	O	Charge ON/OFF control. "H": ON
15		O	Not used
16	BATCHK	O	Battery voltage check switch ON/OFF control. "H": ON
17	PMUTE	O	Not used
18	$\overline{\text{TEST}}$	I	Test mode setting. "L": Test mode
19	VSS	—	GND
20	3.5V	I	External power supply present/absent detection. "H": Present
21	OP/ $\overline{\text{CL}}$	I	OPEN/CLOSE switch input. "H": Open
22	$\overline{\text{PACK IN}}$	I	Disc present/absent detection. "H": Present
23	AVLSPB	I	Not used
24	CLOCK	I	CLOCK SET key input (Connected to 3.1V)
25	AVLSI	I	Headphone remote controller AVLS switch input
26	$\overline{\text{50I0}}$	I	Fixed at "H" in this unit
27	4.5V	I	External power supply 4.5V present/absent detection. "L": Present
28		O	Not used
29	$\overline{\text{BOOST}}$	I	BASS BOOST key input (Connected to 3.1V)
30	$\overline{\text{PLAY}}$	I	PLAY key input
31	$\overline{\text{RECKEY}}$	I	REC key input (Connected to 3.1V)
32	$\overline{\text{HOLD}}$	I	HOLD switch input. "L": ON
33	POK	O	Laser power OK signal output
34		O	Not used
35	BEEP	O	Headphone buzzer output
36	WP2	I	Key wake-up input
37	WP1	I	Wake-up input for power supply and disc detecting
38	SLVREQ	I	Request signal from main microprocessor
39	KEYON	O	Key of remote controller reception switch. "H": ON
40	SDO1	I	Serial data from main microprocessor
41	SDI1	O	Serial data to main microprocessor
42	SCK1	I	Serial clock from main microprocessor
43	AVSS	—	GND
44	AVR	—	Reference voltage
45	KEY0	I	Unit key input (A/D input)
46	KEY1	I	Headphones remote controller key input (A/D input)
47	BATMNT	I	Rithium ion battery – terminal voltage input (A/D input)
48	UNREG	I	Power supply voltage input (A/D input)

**IC805 MAIN SYSTEM CONTROL (CXP81848-603R)**

Pin No.	Signal Name	I/O	Function	Connection											
1	TX	O	Data output enable signal during REC. "L": Active (Not used)												
2	REC	O	"H": REC mode, "L": PLAY mode (Not used)												
3	RFSW0	O	"H": High reflectance disc "L": Low reflectance disc	CXA1861R											
4	RFSW1	O	"H": PIT area "L": GROOVE area												
			<table border="1"> <tr> <td>SW0</td> <td>SW1</td> <td></td> </tr> <tr> <td>H</td> <td>H</td> <td>PREMASTER</td> </tr> <tr> <td>L</td> <td>H</td> <td>PTOC</td> </tr> <tr> <td>L</td> <td>L</td> <td>MO</td> </tr> </table>		SW0	SW1		H	H	PREMASTER	L	H	PTOC	L	L
SW0	SW1														
H	H	PREMASTER													
L	H	PTOC													
L	L	MO													
5	MODON	O	High frequency module ON/OFF control. "H": ON	CXD8498N											
6	AGCTCI	O	RF AGC amplifier time constant control "L" when WRITE ↔ READ laser power switching (approx. 30 msec) and when focus search (until focus is successful)	CXD8498N											
7	SDIO4	O	Serial data to EVR (IC314) and EEPROM												
8 to 10			Not used												
11	INSL	O	Digital input/analog input switching. "H": Digital input (Not used)	CXD2531BR											
12			Not used												
13	DB7	I/O	Data BIT7 to LCD driver and BUSY check (Not used)												
14 to 20	DB6 to DB0	O	Data BIT6 to BIT0 to LCD driver (Not used)												
21	DSP-E	O	Enable signal to LCD driver (Not used)												
22	DSP-RW	O	READ/WRITE signal to LCD driver (Not used)												
23	DSP-RS	O	Display register select signal to LCD driver (Not used)												
24	ASYMUTE	O	ASY reference voltage muting during track jump (MO disc only) (Not used)												
25	LDON	O	Laser ON signal. "H": ON												
26	LOAD	O	Load signal to EVR (IC506)												
27	SLVREQ	O	Request signal to sub-microprocessor	MB89133A											
28			Not used												
29	XSHKEN	O	Enable signal to REC shock detection IC	CXD8948N											
30	LAT	O	Latch signal to REC shock detection IC	CXD8948N											
31	STCONT	O	Stepping motor control. "L": ON (Not used)												
32	ADIPCONT	O	Servo system power supply ON/OFF control. "L": ON												
33	RECCONT	O	REC driver control. "L": ON (Not used)												
34	RECLEL	O	REC LED control. "L": ON (Not used)												
35	OPR/CHG-LED	O	OPR/CHG LED control. "L": ON												
36	DTCONT	O	Dead time control (Not used)	MPC1718FU											
37	MP		Connected to GND												
38	MRST	I	Reset signal from sub-microprocessor	MB89133A											
39	VSS	-	GND												
40	X1	I	System clock (12 MHz)												
41	X2	O													
42	CSO		Connected to 3.1V												
43	SDI1	I	Serial data from sub-microprocessor	MB89133A											
44	SDO1	O	Serial data to sub-microprocessor	MB89133A											
45	SCK1	O	Serial clock to sub-microprocessor	MB89133A											

Pin No.	Signal Name	I/O	Function	Connection
46	OUTSEL	O	REC monitor signal switching (Not used)	
47	DBB1	O	DBB (dynamic bass boost) control (Not used)	
48	DBB2	O		
49			Not used	
50	AVSS	—	GND	
51	AVREF	—	3.1V	
52	AVDD	—		
53	SHOCK	I	Shock detection signal during REC (Not used)	
54	SENSEO	I	SENSE signal	CXD2525R-1, CXD8498N
55	FOK	I	Focus OK signal	CXA1861R
56	JACDET	I	LINE IN jack detection signal. "L": Jack insertion (Not used)	
57			Not used	
58	TEMPMNI	I	Temperature detection (A/D input)	
59	OUTLS	I	Pick-up outer periphery detection (A/D input) (Not used)	
60			Not used	
61	FGIN	I	Spindle FG input	
62	TOK	I	Tracking OK signal	CXD8498N
63	MIC DET	I	MIC jack detection signal. "L": Jack insertion	
64	DIN/AIN	I	Digital in/analog in detection. "H": Digital in (Not used)	
65	PROTECT	I	Disc write protect switch input. "H": Write protect (Not used)	
66	REFLECT	I	Disc reflectance detection switch input. "H": Low reflectance disc	
67	50I0/50I1	I	Fixed at GND in this unit	
68	INTSW	I	Stepping motor initial position detection switch input (Not used)	
69	SPMUTE	O	Spindle motor mute signal. "H": Mute	
70	AMUTE	O	Audio mute signal. "H": Mute	
71	DEEMP	O	Audio de-emphasis control. "H": De-emphasis on	
72			Not used	
73	SLMUTE	O	Sled motor mute signal. "H": Mute (PWM output)	
74	FGSV	O	FG servo (PWM output)	
75	DQSY	I	Subcode Q sync of digital in U-bit CD format (Not used)	
76	DATASY	I	ADIP sync/subcode Q sync	CXD2525R-1
77	SDI2	I	Serial data	CXD2525R-1, CXD2526AR
78	SDO2	O	Serial data	CXD2525R-1, CXD2526AR, CXD2531BR, CXD8498N
79	SCK2	I/O	Serial clock	CXD2525R-1, CXD2526AR, CXD2531BR, CXD8498N
80	INT	I	Interruption request from shock proof memory controller	CXD2526AR

5-5. SCHEMATIC DIAGRAM — RF/SERVO SECTION —  
• See page 50 to 54 for IC Block Diagrams.

**NOTE**

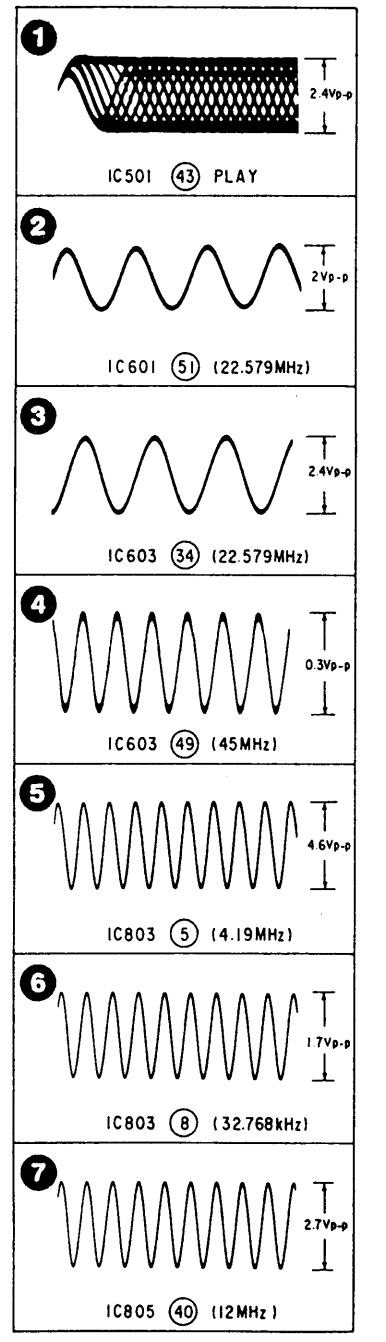

- All capacitors are in  $\mu\text{F}$  unless otherwise noted.  $\mu\text{F}$  50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in  $\Omega$  and  $1/\text{W}$  or less unless otherwise specified.
- % indicates tolerance.

**Note:**  
The components identified by mark  $\Delta$  or dotted line with mark  $\Delta$  are critical for safety. Replace only with part number specified.

**Note:**  
Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

- —: B+ Line.
- Voltages and waveforms are dc with respect to ground.
- Power voltage is dc 6.0 V and fed with regulated dc power supply from external power voltage jack (L901).
- Measure voltages and waveforms with the test disc (RMS-1) in the playback mode when connecting the ground.
- When measuring with the board opened, push in S806 of the MAIN board or the unit will not operate.
- x : can not be measured.
- Voltages are taken with a VOM (input impedance 10M $\Omega$ ). Voltage variations may be noted due to normal production tolerances.
- Waveforms are taken with an oscilloscope. Voltage variations may be noted due to normal production tolerances.
- Circled numbers refer to waveforms.
- Signal path.
- $\Rightarrow$  : PB

# SECTION 7

## ELECTRICAL PARTS LIST

**CLV** **MAIN**

**NOTE:**

The components identified by mark  $\Delta$  or dotted line with mark  $\Delta$  are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked “\* ” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Color Indication of Appearance Parts Example:  
 KNOB, BALANCE (WHITE) . . . (RED)  
                                   ↑                                  ↑  
                                   Parts color Cabinet's color
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.
- RESISTORS  
 All resistors are in ohms  
 METAL: Metal-film resistor  
 METAL OXIDE: Metal Oxide-film resistor  
 F : nonflammable
- SEMICONDUCTORS  
 In each case, u:  $\mu$  , for example:  
 uA...:  $\mu$  A..., uPA...:  $\mu$  PA..., uPB...:  $\mu$  PB...,  
 uPC...:  $\mu$  PC..., uPD...:  $\mu$  PD...
- CAPACITORS  
 uF :  $\mu$  F
- COILS  
 uH :  $\mu$  H
- CND : Canadian model
- AUS : Australian model
- JE : Tourist model

The components identified by mark  
△ or dotted line with mark △ are  
critical for safety.  
Replace only with part number  
specified.

Les composants identifiés par une  
marque △ sont critiques pour la  
sécurité.  
Ne les remplacer que par une pièce  
portant le numéro spécifié.
