## ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE △ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

**CAUTION**

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

**On power sources**

- Use house current, nickel metal hydride rechargeable battery, LR6 (size AA) battery, or car battery.
- For use in your house: Do not use any other AC power adaptor since it may cause the recorder to malfunction.

**Polarity of the plug**

- Connect the AC power adaptor to an easily accessible AC outlet. Should you notice an abnormality in the AC power adaptor, disconnect it from the AC outlet immediately.
- The recorder is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet, even if the recorder itself has been turned off.
- If you are not going to use this recorder for a long time, be sure to disconnect the power supply (AC power adaptor, dry battery, rechargeable battery, or car battery cord). To remove the AC power adaptor from the wall outlet, grasp the adaptor plug itself; never pull the cord.

**Notes on chip component replacement**

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

**Flexible Circuit Board Repairing**

- Keep the temperature of the soldering iron around 270 °C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

**UNLEADED SOLDER**

Boards requiring use of unleaded solder are printed with the lead-free mark (LF) indicating the solder contains no lead.

(Caution: Some printed circuit boards may not come printed with the lead free mark due to their particular size)

**LF : LEAD FREE MARK**

Unleaded solder has the following characteristics.

- Unleaded solder melts at a temperature about 40 °C higher than ordinary solder.  
Ordinary soldering irons can be used but the iron tip has to be applied to the solder joint for a slightly longer time.  
Soldering irons using a temperature regulator should be set to about 350 °C .  
Caution: The printed pattern (copper foil) may peel away if the heated tip is applied for too long, so be careful!
- Strong viscosity  
Unleaded solder is more viscous (sticky, less prone to flow) than ordinary solder so use caution not to let solder bridges occur such as on IC pins, etc.
- Usable with ordinary solder  
It is best to use only unleaded solder but unleaded solder may also be added to ordinary solder.

## SECTION 1 SERVICING NOTES

**NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT**

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

**NOTES ON LASER DIODE EMISSION CHECK**

Never look into the laser diode emission from right above when checking it for adjustment. It is feared that you will lose your sight.

**NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK (LCX-5R)**

The laser diode in the optical pick-up block may suffer electrostatic break-down easily. When handling it, perform soldering bridge to the laser-tap on the flexible board. Also perform measures against electrostatic break-down sufficiently before the operation. The flexible board is easily damaged and should be handled with care.

**OPTICAL PICK-UP FLEXIBLE BOARD**

- In performing the repair with the power supplied to the set, removing the MAIN board causes the set to be disabled. In such a case, fix a convex part of the open/close detect switch (S803 on MAIN board) with a tape in advance. Handle the FLEXIBLE board (over write head) with care, as it has been soldered directly to the MAIN board. In repairing the component side of MAIN board, connect the FLEXIBLE board (over write head) and the MAIN board with the lead wires in advance.

- This set requires the patch data in the nonvolatile memory (IC852) to be rewritten using the application, when the MAIN board was replaced. (See page 31)

**System requirements**

## SECTION 4 TEST MODE

### Outline

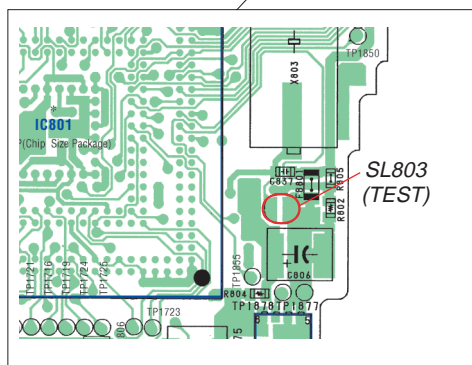

- This set provides the Overall adjustment mode that allows CD and MO discs to be automatically adjusted when in the test mode. In this overall adjustment mode, the disc is discriminated between CD and MO, and each adjustment is automatically executed in order. If a fault is found, the system displays its location. Also, the manual mode allows each individual adjustment to be automatically adjusted.
- Operation in the test mode is performed with the set. A key having no particular description in the text, indicates a set key.

### Setting Method of Test Mode

There are three different methods to set the test mode:

- ① Short SL803 (TEST) on the MAIN board with a solder bridge (connect pin ② of IC801 to the ground). Then, turn on the power.

#### – MAIN Board (Side B) –

- ② In the normal mode, turn on the **[HOLD]** switch. While pressing the **[GROUP]** key press the following order:

- ③ In the normal mode, turn on the **[HOLD]** switch on the set. While pressing the **[CANCEL/CHG]** key on the set, press the keys on the remote commander with the following order :

**Note:** If electrical adjustment (CD and MO overall adjustment) has not been finished completely, "NV Error" is displayed on LCD of the set.

### Operation in Setting the Test Mode

- When the test mode becomes active, first the display check mode is selected.
- Other mode can be selected from the display check mode.
- When the test mode is set, the LCD repeats the following display.

Set LCD display

- When the **[HOLD]** key is pressed and hold down, the display at that time is held so that display can be checked.

### Releasing the Test Mode

For test mode set with the method ①:

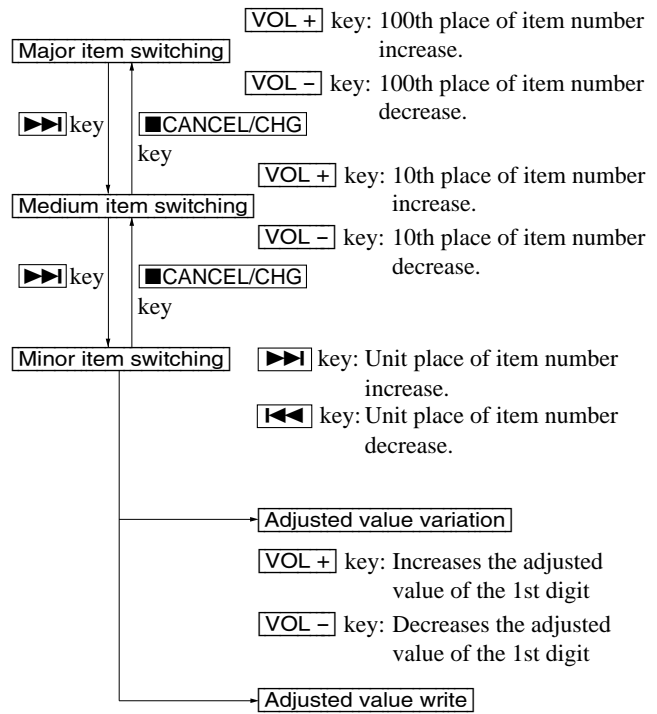

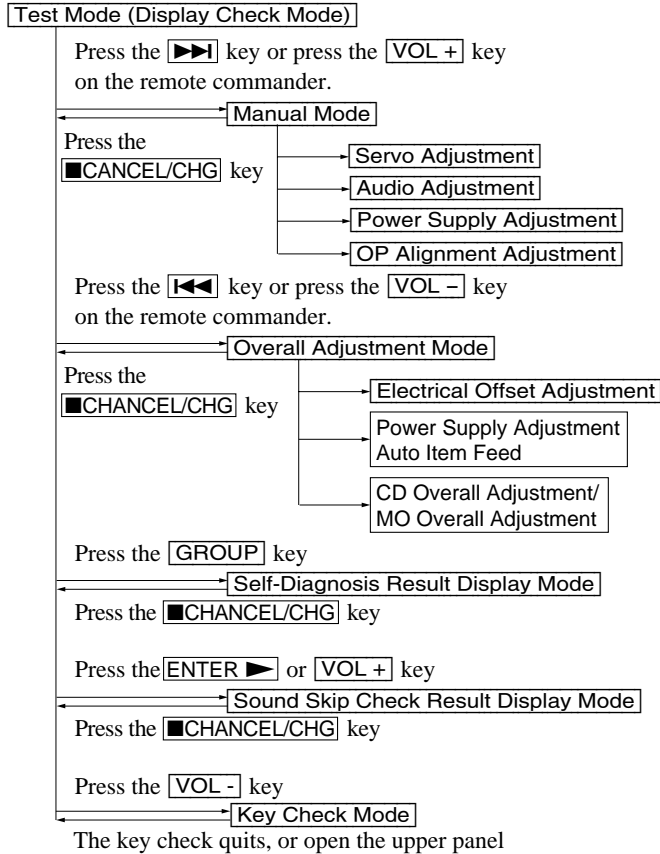

Turn off the power and open the solder bridge on SL803 (TEST) on the MAIN board.

**Note:** Remove the solders completely. Remaining could be shorted with the chassis, etc.

For test mode set with the method ② or ③:

Turn off the power.

## Configuration of Test Mode

**■** key on the set or **■** key on the remote commander : When adjusted value is changed:  
Adjusted value is written.  
When adjusted value is not changed:  
That item is adjusted automatically.

## Manual Mode

Mode to adjust or check the operation of the set by function.

Normally, the adjustment in this mode is not executed.

However, the Manual mode is used to clear the memory, power supply adjustment, and laser power check before performing automatic adjustments in the Overall Adjustment mode.

### • Transition Method in Manual Mode

1. Set the test mode (see page 13).
2. Press the **▶▶▶** or press the **VOL +** key on the remote commander activates the manual mode where the LCD display as shown below.

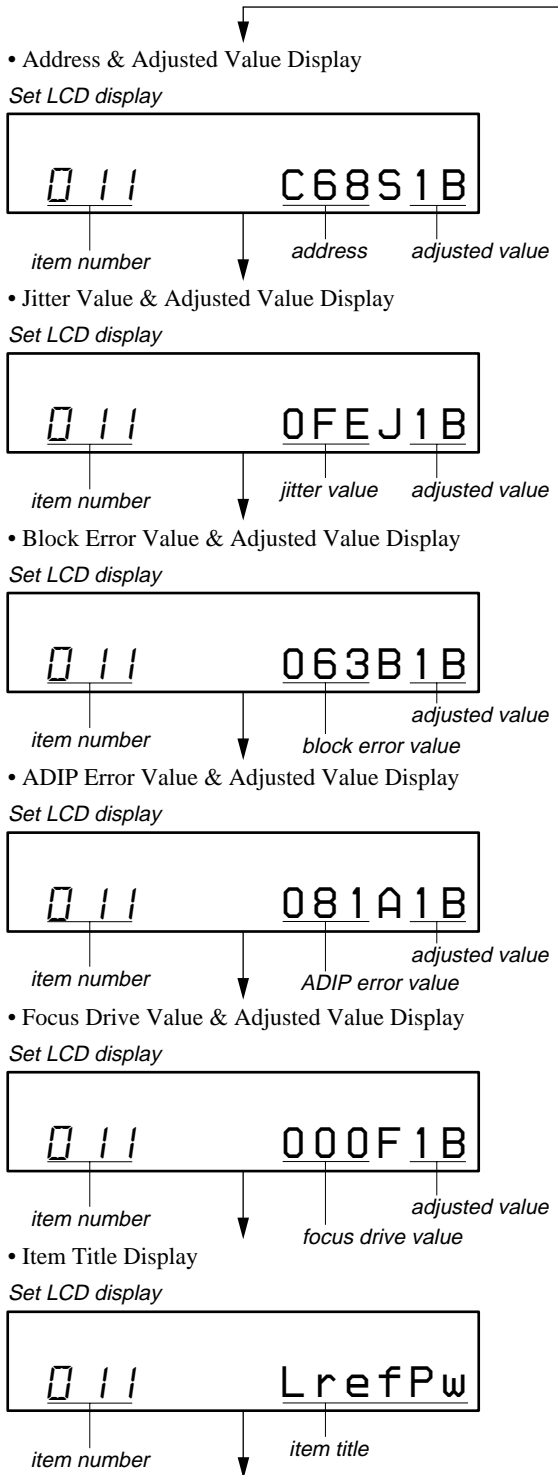

Set LCD display

3. During each test, the optical pick-up moves outward or inward while the **▶▶▶** or **◀◀◀** key is pressed for several seconds respectively.
4. Each test item is assigned with a 3-digit item number; 100th place is a major item, 10th place is a medium item, and unit place is a minor item.

The values adjusted in the test mode are written to the nonvolatile memory (for the items where adjustment was made).

5. The display changes as shown below each time the **[END SEARCH]** key is pressed.

However in the power mode (item number 700s), only the item is displayed.

6. Quit the manual mode, and press the **[CANCEL/CHG]** key to return to the test mode (display check mode).

### Overall Adjustment Mode

Mode to adjust the servo automatically in all items. Normally, automatic adjustment is executed in this mode at the repair.

For further information, refer to "SECTION 5 ELECTRICAL ADJUSTMENTS" (see page 19).

### Self-Diagnosis Result Display Mode

This set uses the self-diagnostic function system in which if an error occurred during the recording or playing, the mechanism control block and the power supply control block in the microcomputer detect it and record its cause as history in the nonvolatile memory.

By checking this history in the test mode, you can analyze a fault and determine its location.

Total recording time is recorded as a guideline of how long the optical pick-up has been used, and by comparing it with the total recording time at the time when an error occurred in the self-diagnosis result display mode, you can determine when the error occurred.

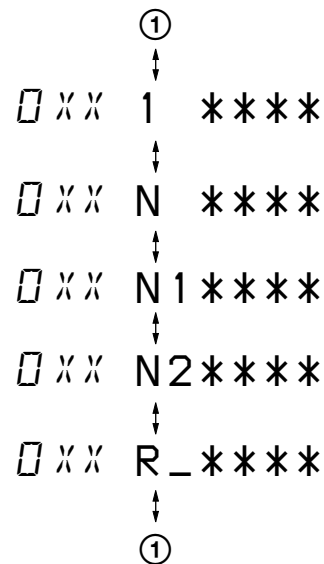

Clear both self-diagnosis history data and total recording time, if the optical pick-up was replaced.

#### • Self-Diagnosis Result Display Mode Setting Method

1. Set the test mode (see page 13).
2. In the display check mode, press the **[GROUP]** key activates the self-diagnosis result display mode where the LCD display as shown below.

3. Then, each time the **[▶▶]** key is pressed, LCD display descends by one as shown below. Also, the LCD display ascends by one when the **[◀◀]** key is pressed.

XX : Error code  
\*\*\*\* : Total recording time

If the **[GROUP]** key is pressed with this display, the LCD switches to the simple display mode.

4. Quit the self-diagnosis result display mode, and press the **[CANCEL/CHG]** key to return to the test mode (display check mode).

## Rewriting the Patch Data at Replacement of Main Board

This set requires the patch data in the nonvolatile memory (IC852) to be rewritten using the application, when the MAIN board was replaced.

**Cation:** The application that meets the microcomputer version in this set must be used when rewriting the patch data. Rewriting the patch data using the application not suitable for the microcomputer version could cause the set to malfunction.  
For a checking method of the microcomputer version, see “SECTION 4 TEST MODE” (page 13).

### • Preparation

1. USB cable (attached to the set)
2. Personal computer in which the Net MD Driver has been installed. (For further information, see “System requirements” (page 4) in “SECTION 1 SERVICING NOTES”)
3. Application “USB\_PatchWriter” for patch data rewriting

### • How to Get the Application “USB\_PatchWriter” for Patch Data Rewriting

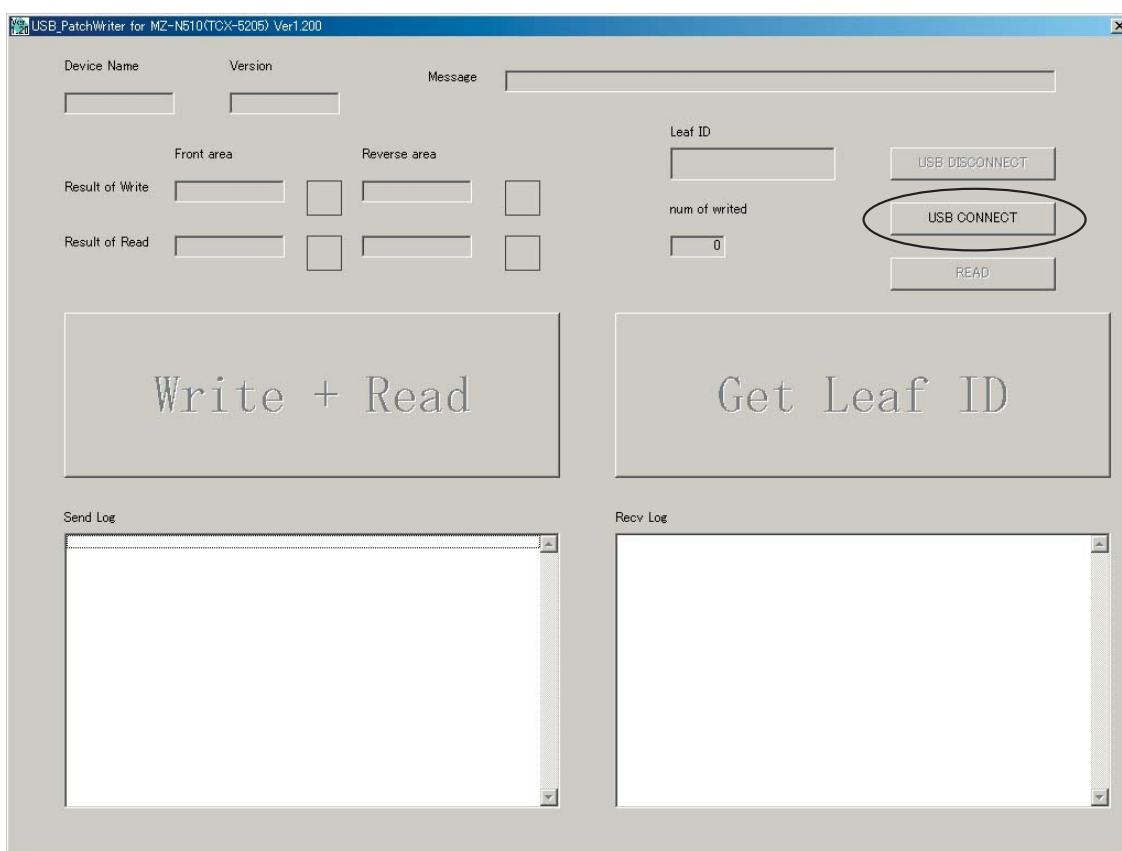

Contact our service technical support division to get the application.

### • Pre-check

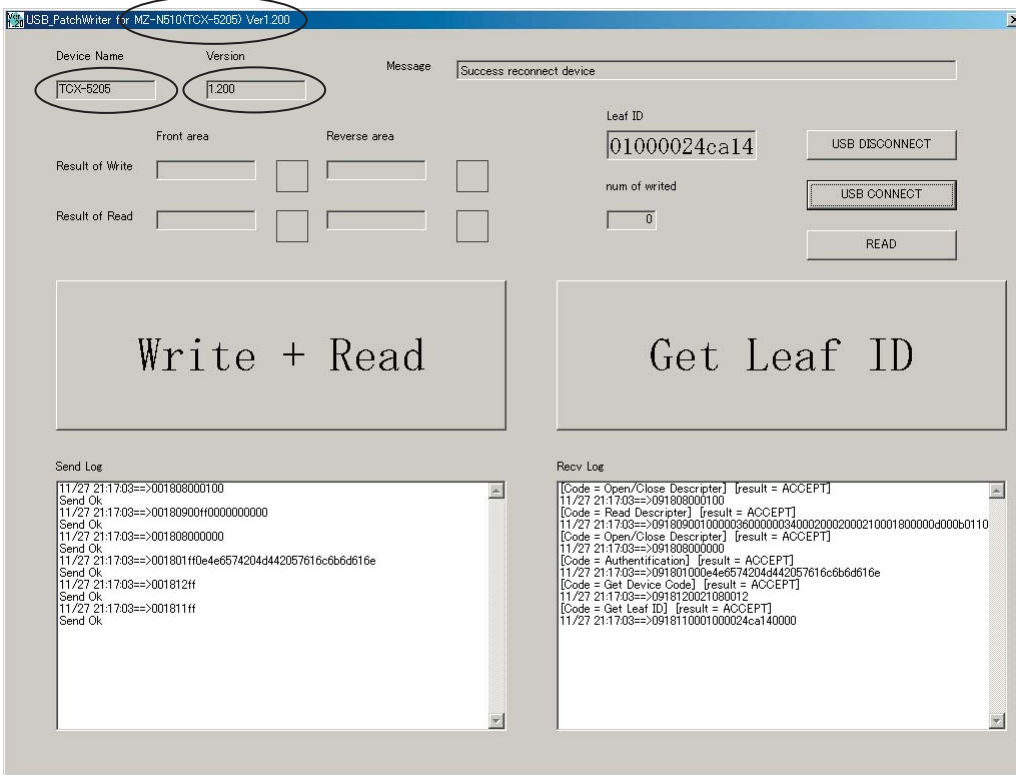

1. Check the microcomputer version in this set. (For a checking method of the microcomputer version, see “SECTION 4 TEST MODE” (page 13).)
2. Check that the Net MD Driver has been installed in the personal computer.
3. Make sure that the set is in the Normal mode.  
**Note:** Do not rewrite the patch data in the Test mode.

### • Rewriting the Patch Data

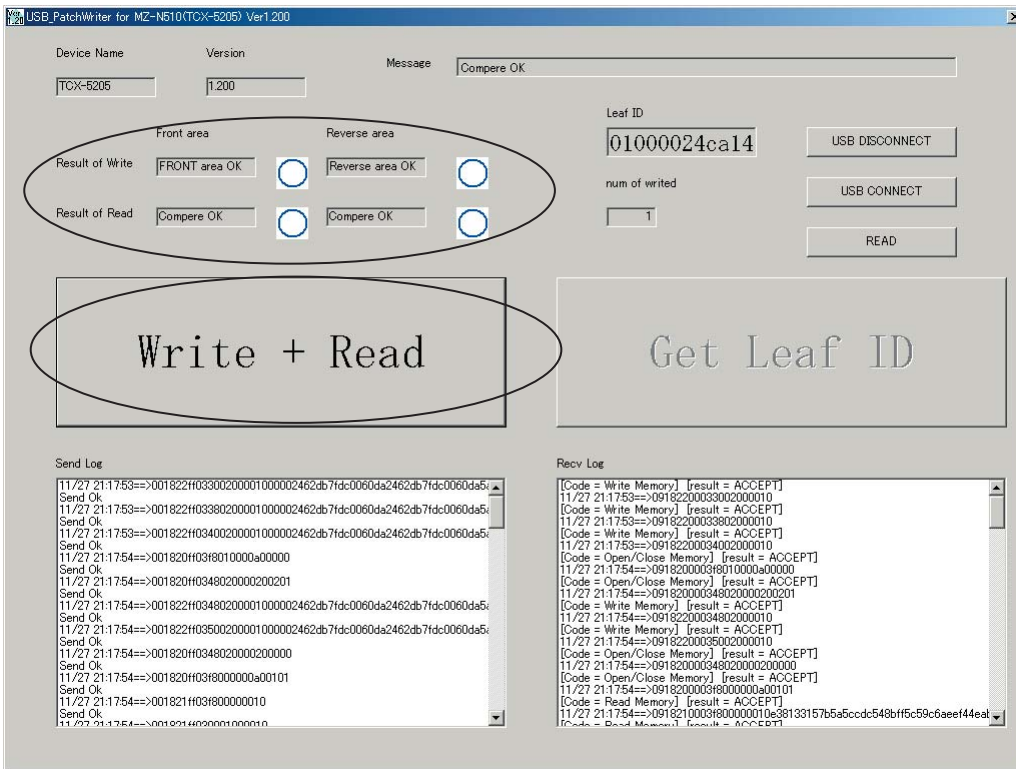

1. Connect the set to the personal computer with the USB cable.
2. Start the application “USB\_PatchWriter”.
3. Make sure that the following window opens.
4. Click the [USB CONNECT] button.

- Confirm that the model and version indicated on the title bar coincide with the codes displayed in the Device Name block and the Version block in the window.

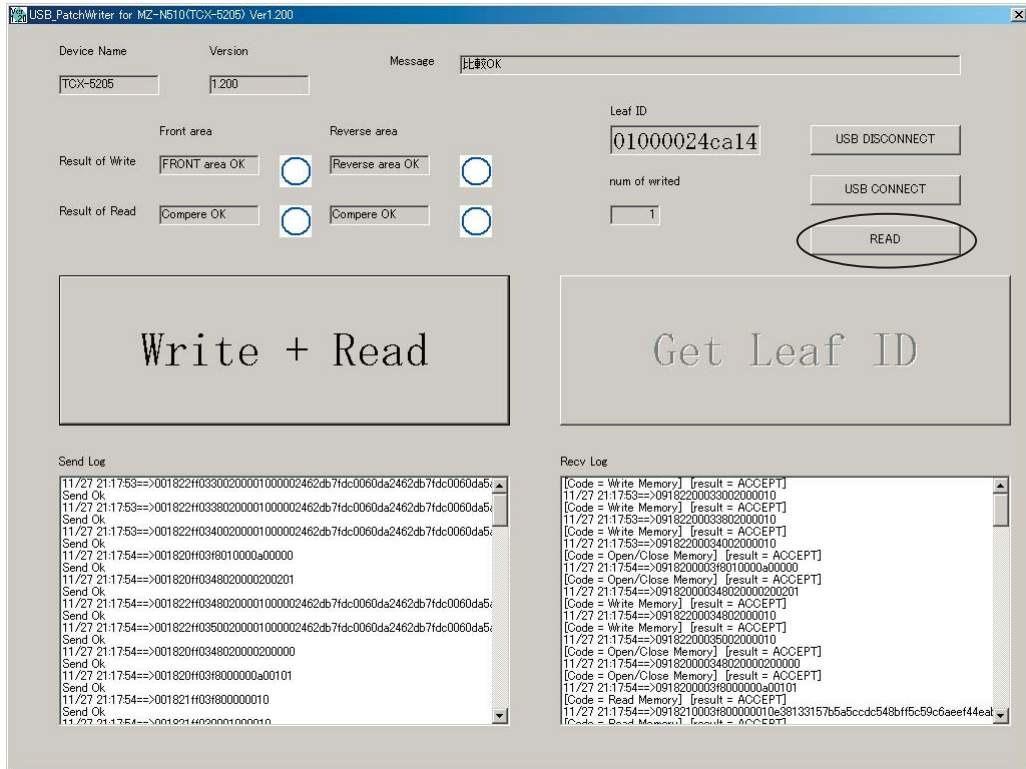

- Click the [Write + Read] button. The patch data writing and the verify processing will be executed automatically in the following order:
  - Writing to patch area (front area)
  - Writing to patch area (reverse area)
  - Verifying patch area (front area)
  - Verifying patch area (reverse area)
- The operation will terminate with the  (blue) mark given to all areas. If the  (red) mark is given to any area, the nonvolatile memory will be faulty.

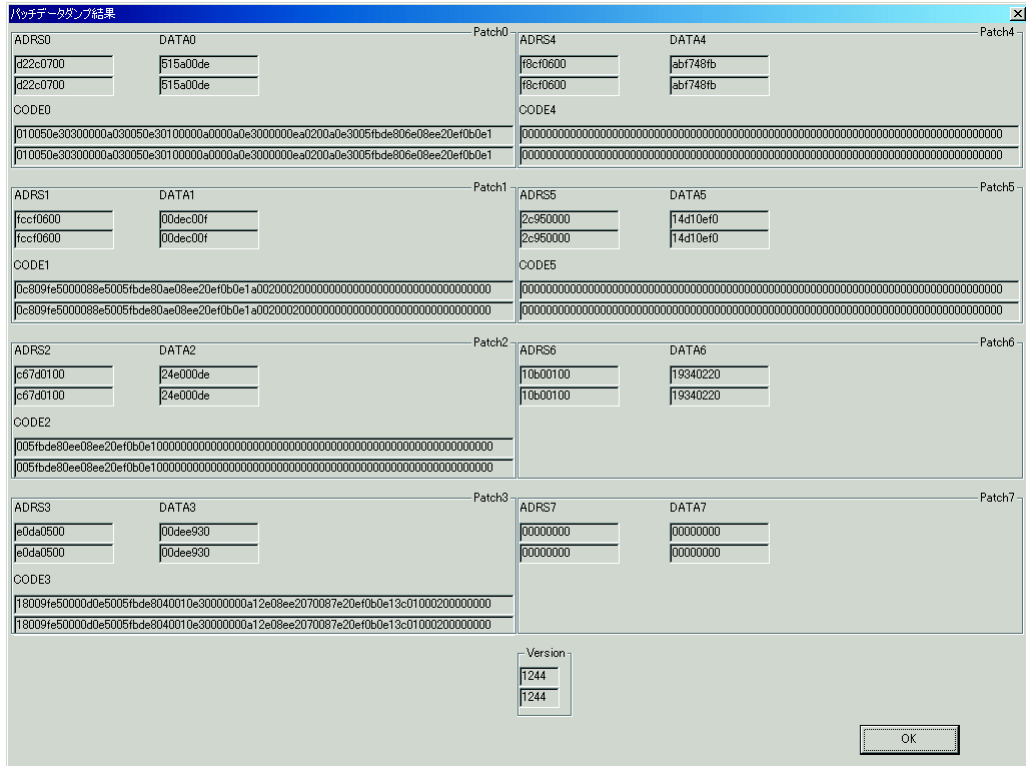

• Confirmation of contents of the patch data rewritten

1. Click the [READ] button to confirm the contents of the patch data rewritten.

2. The application reads out the front and reverse patch areas and displays the results in the edit box. Confirm that the upper column coincides with the lower column as the following window.
3. Click the [OK] button to close the window.

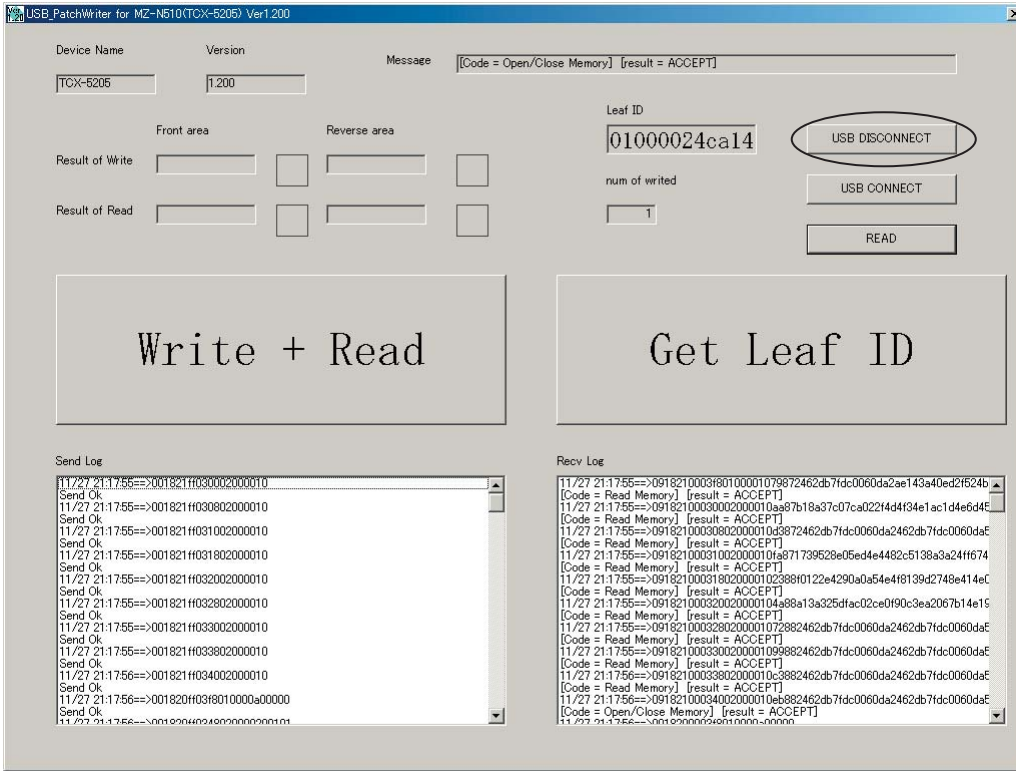

# MZ-N510CK

- Disconnecting the USB cable

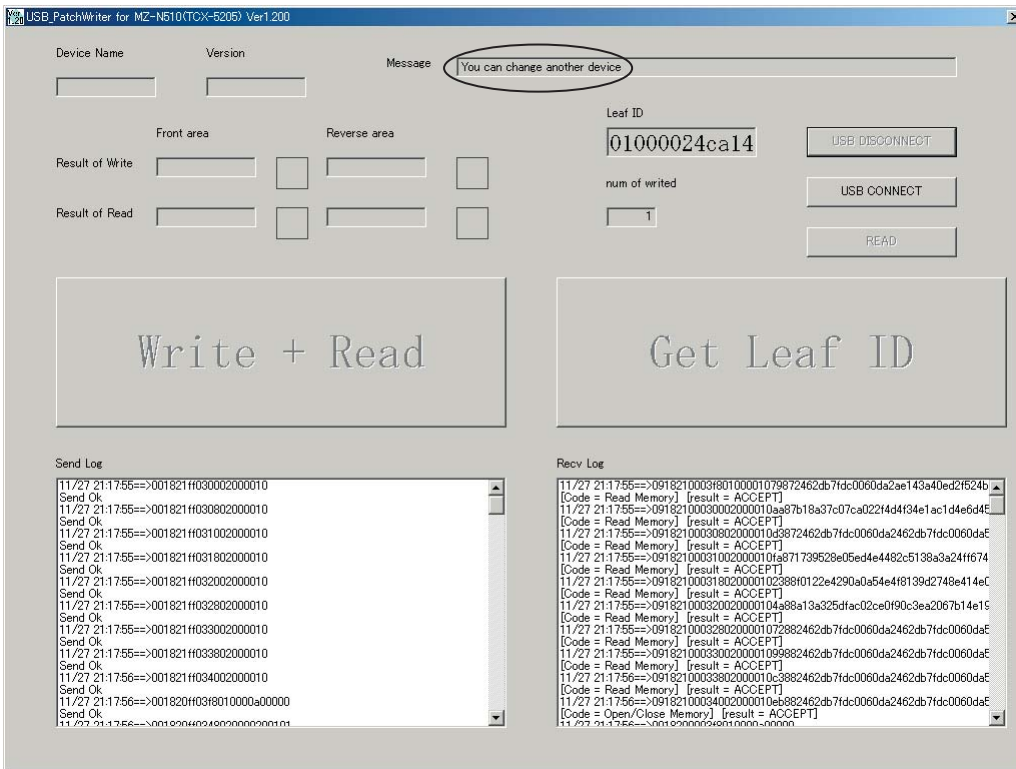

Disconnect the USB cable as the following procedure after rewriting the patch data and confirmation.

**Note :** When the following procedure is not completed but USB cable is extracted, the application does not recognize the set at exchanging of the set.

1. Click the [USB DISCONNECT] button.

2. Confirm that "You can change another device" is displayed in the message block.

3. Disconnect the USB cable from the personal computer and the set.

## Rewriting the NV values

**Caution:** The application that meets the microcomputer version in this set must be used when rewriting the NV values. Rewriting the NV values using the application not suitable for the microcomputer version could cause the set to malfunction.  
For a checking method of the microcomputer version, see “SECTION 4 TEST MODE” (page 13).

## SECTION 8 ELECTRICAL PARTS LIST

MAIN

**NOTE:**

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- **RESISTORS**  
All resistors are in ohms.  
METAL: Metal-film resistor.  
METAL OXIDE: Metal oxide-film resistor.  
F: nonflammable
- Abbreviation  
CND : Canadian model  
MX : Mexican model
- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- **SEMICONDUCTORS**  
In each case, u:  $\mu$ , for example:  
uA. . :  $\mu$ A. .      uPA. . :  $\mu$ PA. .  
uPB. . :  $\mu$ PB. .    uPC. . :  $\mu$ PC. .  
uPD. . :  $\mu$ PD. .
- **CAPACITORS**  
uF:  $\mu$ F
- **COILS**  
uH:  $\mu$ H

The components identified by mark  $\Delta$  or dotted line with mark  $\Delta$  are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board.
