WARNING

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

This symbol is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Caution
The use of optical instruments with this product will increase eye hazard.

Owner's Record
The model and serial numbers are located on the rear of the unit. Record the serial number in the space provided below. Refer to these numbers whenever you call upon your Sony dealer regarding this product.

Model No. MDS-JA3ES
Serial No. _

INFORMATION
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION
You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

Welcome!

Thank you for purchasing the Sony MiniDisc Deck. Before operating the deck, please read this manual thoroughly and retain it for future reference.

About This Manual

The instructions in this manual are for model MDS-JA3ES.

Conventions
- Controls in the instructions are those on the deck; these may, however, be substituted by controls on the remote that are similarly named or, when different, appear in the instructions within brackets.
- The following icons are used in this manual:

  ![Icon] Indicates a procedure that requires use of the remote.
  ![Icon] Indicates tips for making the task easier and hints.

Basic Operations

Recording on an MD

See pages 7 and 8 for hookup information.

1. Turn on the amplifier and play the program source you want to record.

2. Press POWER.
   The ON/STANDBY indicator changes from red to green.

3. Insert a recordable MD.

   ![Inserting MD](With the arrow pointing this way, With the label side up)

   If the MD has recorded material on it, the deck will automatically start recording from the end of the last recorded track.

4. Set INPUT to the corresponding input connector.

<table>
<thead>
<tr>
<th>To record through</th>
<th>Set INPUT to</th>
</tr>
</thead>
<tbody>
<tr>
<td>LINE IN or MIC L(MONO)/R</td>
<td>ANALOG</td>
</tr>
<tr>
<td>DIGITAL IN OPTICAL</td>
<td>OPTICAL</td>
</tr>
<tr>
<td>DIGITAL IN COAXIAL</td>
<td>COAXIAL</td>
</tr>
</tbody>
</table>

5. Press ●REC.
   The deck becomes ready to record.
When "TOC" flashes in the display
The deck is currently updating the Table Of Contents (TOC).
Do not move the deck or pull out the AC power cord. Changes to an MD made through recording are saved only when you update the TOC by ejecting the MD or changing the deck to standby by pressing POWER.

6 When recording the analog input signal, adjust the recording level with REC LEVEL.
   The fourth dot is satisfactory for most purposes. For details, refer to “Adjusting the Recording Level” on page 12.

7 Press ▶ or □.
   Recording starts.

8 Start playing the program source.

Do not disconnect the deck from the power source immediately after recording
If you do, recorded material may not be saved to the MD. To save the material, after recording, press △ EJECT to take out the MD or change the deck to standby by pressing POWER. “TOC” will flash in the display at this time.
After “TOC” stops flashing and goes out, you can pull out the AC power cord.

<table>
<thead>
<tr>
<th>To</th>
<th>Press</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stop recording</td>
<td>■</td>
</tr>
<tr>
<td>Pause recording*</td>
<td>□. Press the button again or press ▶ to resume recording.</td>
</tr>
<tr>
<td>Take out the MD</td>
<td>△ EJECT after stopping recording</td>
</tr>
</tbody>
</table>

* Whenever you pause recording, the track number increases by one. For example, if you paused recording while recording on track 4, the track number increases by one and recording continues on the new track when restarted.

To protect an MD against accidental erasure
To make it impossible to record on an MD, slide the tab in the direction of arrow, opening the slot. To allow recording, close the slot.
Playing an MD

1. Turn on the amplifier and set the source selector to the position for MD deck.

2. Press POWER.
The ON/STANDBY indicator changes from red to green.

3. Insert an MD.

4. Press ▶.
The deck starts playing. Adjust the volume on the amplifier.

<table>
<thead>
<tr>
<th>To</th>
<th>Do the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stop playing</td>
<td>Press ■.</td>
</tr>
<tr>
<td>Pause playing</td>
<td>Press ■. Press the button again or press ▶ to resume playing.</td>
</tr>
<tr>
<td>Go to the next track</td>
<td>Turn AMS clockwise (or press ▶ ◄ on the remote).</td>
</tr>
<tr>
<td>Go to the preceding track</td>
<td>Turn AMS counterclockwise (or press ◄ ◄ on the remote).</td>
</tr>
<tr>
<td>Take out the MD</td>
<td>Press △ EJECT after stopping playing.</td>
</tr>
</tbody>
</table>

You can locate and play back a track while the deck is stopped
1. Turn AMS (or press ◄ ◄ or ▶ ◄) until the number of the track you want to play appears.
2. Press AMS or ◄ ◄.

To use headphones
Connect them to PHONES jack. Use PHONE LEVEL to adjust the volume.

See pages 7 and 8 for hookup information.
Unpacking

Check that you received the following items:
- Audio connecting cords (2)
- Remote commander (remote) (RM-D2M) (1)
- Sony SUM-3 (NS5) batteries (2)

Inserting batteries into the remote

You can control the deck using the supplied remote. Insert two R6 (size-AA) batteries by matching the + and - on the batteries. When using the remote, point it at the remote sensor on the deck.

💡 When to replace batteries
With normal use, the batteries should last for about six months. When the remote no longer operates the deck, replace all the batteries with new ones.

Notes
- Do not leave the remote near an extremely hot or humid place.
- Do not drop any foreign object into the remote casing, particularly when replacing the batteries.
- Do not expose the remote sensor to direct sunlight or lighting apparatuses. Doing so may cause a malfunction.
- If you don’t use the remote for an extended period of time, remove the batteries to avoid possible damage from battery leakage and corrosion.

Hooking Up the System

Overview

This section describes how to hook up the MD deck to an amplifier or other components such as a CD player or DAT deck. Be sure to turn off the power of each component before connection.

![Diagram of audio connections]

What cords will I need?

- Audio connecting cords (supplied) (2)

- Optical cable (not supplied) (2)

- Coaxial digital connecting cable (not supplied) (1)
Hookups

Connecting the deck to an amplifier
Connect the amplifier to the LINE IN/OUT jacks using the audio connecting cords (supplied), making sure to match the color-coded cords to the appropriate jacks on the components: red (right) to red and white (left) to white. Be sure to make connections firmly to prevent hum and noise.

Note
If "Din Unlock" or "Cannot Copy" appears in the display, recording through the digital connector is not possible. In this case, record the program source through the LINE IN jacks with INPUT set to ANALOG.

Connecting the AC power cord
Connect the AC power cord to a wall outlet or to the outlet of a timer.

Note
With the exception of a timer outlet, do not connect the AC power cord to a switched outlet.

Where do I go next?
Now you’re ready to use your deck. For basic operations, go to pages 4 to 6; for advanced operations, go to the sections immediately after this one.

- Connecting the optical cables

- Connecting the coaxial digital connecting cable

💡 Automatic conversion of digital sampling rates during recording
A built-in 20-bit sampling rate converter automatically converts the sampling frequency of various digital sources to the 44.1 kHz sampling rate of your MD deck. This allows you to record sources such as 32- and 48-kHz DAT or satellite broadcasts, as well as compact discs and other MDs.
Setting the Clock

Once you set the MD deck's internal clock, the MD deck will automatically record the date and time of all recordings. When playing a track, you can display the date and time the track was recorded (see page 18). Time on this deck is displayed in a 12-hour clock.

1. Press CLOCK SET down for about 2 seconds until the year indication in the display starts flashing.

2. Turn AMS to enter the current year, then press AMS.
   The year indication stops flashing, and the month indication starts flashing.

3. Repeat Step 2 to enter the month, day, hour, and minute.

For precise time and date stamping of recordings
Reset the time at least once a week.

Note
If you disconnect the AC power cord for a long time, the memorized settings will disappear, and "STANDBY" will flash in the display the next time you plug in and turn on the deck. If this happens, reset the clock.

Displaying the current date and time
Press CLOCK SET on the deck.
Each press of the button changes the display as follows:

When using the remote, press DATE PRESENT.
The date appears, followed by the time.

Changing the date and/or time

1. Press CLOCK SET down for about 2 seconds until the year indication in the display starts flashing.

2. Press AMS repeatedly until the item you want to change flashes.

3. Turn AMS to change the contents of the selected item.

4. To complete the setting, press AMS repeatedly until all items stop flashing.
For basic recording operations, see pages 4 and 5.

Notes on Recording

If “Protected” appears in the display
The MD is record-protected. Close the slot to record on the disc (see “To protect an MD against accidental erasure” on page 5).

If “Din Unlock” flashes in the display
• The program source is not connected to DIGITAL IN OPTICAL or COAXIAL even though you’ve selected OPTICAL or COAXIAL in Step 4 on page 4. To continue, connect the program source through DIGITAL IN OPTICAL or COAXIAL or set INPUT to ANALOG to record through LINE IN.
• The digital signal has been interrupted (stopped) while you were recording. To continue recording, restart the digital program source. To stop recording, press ■ on the MD deck.

Depending on source being recorded, track numbers are marked in following ways:
• When recording from a CD or MD with INPUT at OPTICAL or COAXIAL and the source connected through DIGITAL IN OPTICAL or COAXIAL:
  The deck automatically marks track numbers in the same sequence as the original. If, however, a track is repeated two or more times (e.g. by single-track repeat play) or two or more tracks with the same track number (e.g. from different MDs or CDs) are played, the track or tracks are recorded as part of a single, continuous track with a single track number. If the source is an MD, track numbers may not be marked for tracks of less than 4 seconds.
• When recording from source connected through LINE IN with INPUT at ANALOG, and “LEVEL SYNC” does not light up (see “Marking Track Numbers While Recording” on page 13) or when recording from DAT or satellite broadcasts connected through DIGITAL IN OPTICAL or COAXIAL with INPUT at OPTICAL or COAXIAL:
  The source will be recorded as a single track. You can divide the track afterwards using the Divide Function (see “Dividing Recorded Tracks” on page 25) or mark track numbers during recording by using the Track Marking Function on page 13.
If “LEVEL SYNC” appears in the display, the deck automatically marks track numbers when recording analog source or digital recording of DAT or satellite broadcasts (see “Marking track numbers automatically” on page 13).
• When recording from DAT or satellite broadcasts with INPUT at OPTICAL or COAXIAL, the deck automatically marks a track number whenever the sampling frequency of the input signal changes.

When “TOC” flashes in the display
The deck is currently updating the Table Of Contents (TOC). Do not move the deck or pull out the AC power cord. Changes to an MD made through recording are saved only when you update the TOC by ejecting the MD or changing the deck to standby by pressing POWER.

The MD deck uses the SCMS (Serial Copy Management System on page 33)
MDs recorded through DIGITAL IN OPTICAL or COAXIAL cannot be copied onto other MDs or DAT tapes through DIGITAL OUT OPTICAL.

When recording digital signals that have been emphasized (in the higher frequencies)
The signal is automatically de-emphasized (with attenuation proportional to the degree of emphasis) and the level of the de-emphasized signal is indicated on the peak level meters.

Sampling rate of digital signals
When the deck is recording or in recording pause, digital signals input through DIGITAL IN OPTICAL or COAXIAL are output to DIGITAL OUT OPTICAL with the same sampling rate.
To change the digital input signal to another sampling rate for output (without recording it to an MD), use Input Monitor Function (see page 11).

Useful Tips for Recording

Checking the remaining recordable time on the MD
• When you press DISPLAY while recording, the remaining recordable time on the MD appears.
• When you press DISPLAY repeatedly while the deck is stopped, the display changes as follows: total recorded time, remaining recordable time on the MD, disc name (see page 17).
Monitoring the input signal (Input Monitor)
Before starting recording, you can monitor the selected input signal through the deck’s output connectors.

1 Press depress EJECT to remove the MD.

2 Set INPUT according to the input signal you want to monitor.

When INPUT is at ANALOG
The analog signal input through LINE IN is output to DIGITAL OUT OPTICAL after A/D conversion, and then to the LINE OUT connectors and PHONES jack after D/A conversion.

When INPUT is at OPTICAL or COAXIAL
The digital signal input through DIGITAL IN OPTICAL or COAXIAL is output to DIGITAL OUT OPTICAL after passing through the sampling rate converter, and then to the LINE OUT connectors and PHONES jack after D/A conversion.

3 Press ●REC.
If the input signal is analog, “AD-DA” appears in the display.
If the input signal is digital, “-DA” appears in the display.

If “Auto Cut” appears in the display
(Auto Cut)
There has been no sound input for 30 seconds while INPUT is at OPTICAL or COAXIAL and the source connected through DIGITAL IN OPTICAL or COAXIAL. The 30 seconds of silence are replaced by a blank of about 3 seconds and the deck changes to recording pause.

💡 You can turn off the Auto Cut Function
For details, see “If “Smart Space” appears in the display” below.

If “Smart Space” appears in the display
(Smart Space)
There has been an extended silence of 4 to 30 seconds in length when INPUT is at OPTICAL or COAXIAL and the source connected through DIGITAL IN OPTICAL or COAXIAL. The silence is replaced with a blank of about 3 seconds and the deck continues recording.

To turn off the Smart Space Function and Auto Cut Function
1 During recording pause, press EDIT/NO repeatedly until “S. Space ?” appears in the display.
2 Press YES twice to display “S. Space ON”.

Notes
• When you turn off the Smart Space Function, the Auto Cut Function is also turned off automatically.
• The Smart Space Function and Auto Cut Function are factory set to on.
• The Smart Space Function does not affect the order of the track numbers being recorded, even if the blank space occurs in the middle of a track.

Playing back tracks just recorded
Do this procedure to immediately playback tracks that have just been recorded.

Press ➤ immediately after stopping recording.
Playback starts from the first track of the material just recorded.

To play from the first track of the MD after recording
1 Press ■ again after stopping recording.
2 Press ➤.
Playback starts from the first track of the MD.
Recording Over Existing Tracks

Follow the procedure below to record over existing material just as you would on an analog cassette tape.

1. Do Steps 1 to 4 in “Recording on an MD” on page 4.

2. Turn AMS (or press ◄ or ►) until the number of the track to be recorded over appears.

3. To record from the start of the track, continue from Step 5 in “Recording on an MD” on page 4.

💡 While “TRACK” flashes in the display

The deck is recording over an existing track, and stops flashing when it reaches the end of the recorded portion.

💡 To record from the middle of the track

1. After Step 2 above, press ► to start playback.
2. Press II where you want to start recording.
3. Continue from Step 5 in “Recording on an MD” on page 4.

Note

You cannot record from the middle of an existing track when the “PROGRAM” or “SHUFFLE” is on.

Adjusting the Recording Level

When recording with INPUT at ANALOG and the signal input through LINE IN or MIC L (MONO)/R jack(s) (see page 14), use REC LEVEL to adjust the recording level before starting recording.

1. Do Steps 1 to 5 in “Recording on an MD” on page 4.

2. Play the portion of the program source with the strongest signal level.

3. While monitoring the sound, turn REC LEVEL to adjust the recording level so that the peak level meters reach their highest point without turning on the OVER indication. Occasional lighting of “OVER” is acceptable.

The outer knob controls the L (left) channel level and the inner knob the R (right) channel level. You can adjust the knobs together, or independently by turning one knob while holding the other.

4. Stop playing the program source.

5. To start recording, do the procedure starting from Step 7 in “Recording on an MD” on page 5.
Marking Track Numbers While Recording (Track Marking)

You can mark track numbers either manually or automatically. By marking track numbers at specific points, you can quickly locate the points later using the AMS Function or Editing Functions.

Marking track numbers manually (Manual Track Marking)

You can mark track numbers at any time while recording on an MD.

Press ◇ REC at the place you want to add a track mark while recording.

Marking track numbers automatically (Automatic Track Marking)

The deck adds track marks differently in the following cases:

1. When recording from CDs or MDs with INPUT at OPTICAL or COAXIAL and the source connected through DIGITAL IN OPTICAL or COAXIAL:
   The deck marks track numbers automatically. When you record from a CD or MD, the track numbers are marked as they are found on the original.

2. When recording with INPUT at ANALOG and the source connected through LINE IN, or when recording from DAT or satellite broadcasts with INPUT at OPTICAL or COAXIAL and the DAT or satellite broadcasts connected through DIGITAL IN OPTICAL or COAXIAL:
   The deck marks a new track number whenever the signal level drops and rises to a certain point* (Automatic Track Marking). If “LEVEL SYNC” does not light up, set the LevelSync to ON as follows:

   1. Press EDIT/NO to display “LevelSync ?” during recording or recording pause.

   2. Press YES twice to display “LevelSync ON.” “LEVEL SYNC” appears in the display.

To cancel Automatic Track Marking

1. Press EDIT/NO during recording or recording pause. “LevelSync ?” appears in the display.

2. Press YES.

3. Press EDIT/NO.
   “LevelSyncOFF” appears in the display.

* The signal level must remain low for 2 or more seconds before a new track number is marked.

When you want to mark track numbers after you’ve finished recording

Use the Divide Function (see “Dividing Recorded Tracks” on page 25).

Note

Automatic Track Marking is not possible when recording with microphones (see page 14) even if “LEVEL SYNC” appears in the display.
Starting Recording With 6 Seconds of Prestored Audio Data (Time Machine Recording)

When recording from an FM or satellite broadcast, the first few seconds of material are often lost due to the time it takes you to ascertain the contents and press the record button. To prevent the loss of this material, the Time Machine Recording Function constantly stores 6 seconds of the most recent audio data in a buffer memory so that when you begin recording the program source, the recording actually begins with the 6 seconds of audio data stored in the buffer memory in advance, as shown in the illustration below:

1. **Do Steps 1 to 5 in “Recording on an MD” on page 4.** The deck changes to recording pause.
2. **Start playing the program source you want to record.** The most recent 6 seconds of audio data is stored in the buffer memory.
3. **Press AMS (or T.REC) to start Time Machine Recording.** Recording of the program source starts with the 6 seconds of audio data stored in the buffer memory.

To stop Time Machine Recording
Press ■.

**Note**
The deck starts storing audio data when the deck is in recording pause and you start playing the program source. With less than 6 seconds of playing of the program source and audio data stored in the buffer memory, Time Machine Recording starts with less than 6 seconds of audio data.

Recording With Microphones

You can perform stereo recording using two microphones. When you connect a single microphone to the MIC L(MONO) (left/monaural) jack, the same signal is recorded to both the left and right channels for monaural recording.

1. **Connect the microphone(s) to the MIC L(MONO)/R (or MIC L(MONO)) jack(s).**
2. **Set MIC ATT to ON if necessary.** When recording vocal or musical performances, the signal strength often exceeds the recommended level. If this happens, set MIC ATT to ON to lower the input level by 20 dB.
3. **Do Steps 2 to 5 in “Recording on an MD” on page 4.**
4. **Start playing the program source and adjust the recording level with REC LEVEL (see “Adjusting the Recording Level” on page 12).** By connecting headphones to the PHONES jack, you can monitor the input signal as you adjust the recording level.
5. **Press ▶ or I to start recording.**
6. **Press ■ to stop recording.**

**Notes**
- After using the microphones, be sure to disconnect them. As long as one or both microphones are connected, recording is possible only through the microphone(s).
- Automatic Track Marking (see page 13) is not possible when recording through microphones even if “LEVEL SYNC” appears in the display.
Synchro-Recording With a Sony CD Player

By connecting your deck to a Sony CD player or Hi-Fi Component System, you can easily dub CDs onto MDs using the CD synchro buttons on the remote. If your deck is connected to a Sony CD player by the optical cable or coaxial digital connecting cable through DIGITAL IN OPTICAL or COAXIAL, track numbers are automatically marked as appear on the original regardless of whether "LevelSync ON" or "LevelSync OFF" is selected. If your deck is connected to a Sony CD player by audio connecting cords through LINE IN, track numbers are automatically marked when you select "LevelSync ON" (see "Marking Track Numbers While Recording" on page 13).

As the same remote controls both the CD player and the deck, you may have trouble operating both units if they are far from each other. If you do, place the CD player close to this deck.

1. Set the source selector on the amplifier to CD.
2. Do Steps 2 to 4 in "Recording on an MD" on page 4 to prepare the deck for recording.
3. Insert a CD into the CD player.
4. Select the playback mode (Shuffle Play, Program Play, etc.) on the CD player.
5. Press STANDBY. The CD player pauses for playing and the deck pauses for recording.
6. Press START. The deck starts recording and the CD player starts playback. The track number and elapsed recording time of the track appear in the display.
7. Press STOP to stop synchro-recording.

To pause recording
Press STANDBY or CD PLAYER II. To restart recording, press START or CD PLAYER II. A new track number is marked each time you pause recording.

You can use the remote of the CD player during synchro-recording
When you press on the CD player, the CD player stops and the deck pauses for recording. When you press on the CD player, the CD player pauses and the deck pauses for recording. To restart synchro-recording, press .

You can change CDs during synchro-recording
Do the following steps instead of Step 7 above.
1. Press on the remote of the CD player. The deck pauses for recording.
2. Change the CD.
3. Press on the remote of the CD player. Synchro-recording restarts.

You can check the remaining recordable time on the MD
Press DISPLAY (see page 10).
Recording on an MD Using a Timer

By connecting a timer (not supplied) to the deck, you can start and stop recording operations at specified times. For further information on connecting the timer and setting the starting and ending times, refer to the instructions that came with the timer.

1. Do Steps 1 to 6 in “Recording on an MD” on pages 4 and 5.

2. If you want to specify the time for the start of recording, press ■.
   • If you want to specify the time for the end of recording, do Steps 7 and 8 of “Recording on an MD” on page 5.
   • If you want to specify the time for both start and end of recording, press ■.

3. Set TIMER on the deck to REC.

4. Set the timer as required.
   • When you have set the time for the start of recording, the deck turns off. When the specified time arrives, the deck turns on and starts recording.
   • When you have set the time for the end of recording, recording continues. When the specified time arrives, the deck stops recording and turns off.
   • When you have set the time for both the start and end of recording, the deck turns off. When the starting time arrives, the deck turns on and starts recording. When the ending time arrives, the deck stops recording and turns off.

5. After you have finished using the timer, set TIMER on the deck to OFF. Then place the deck in standby status by plugging the AC power cord of the deck into a wall outlet or set the timer to continuous operation.
   • If TIMER is left at REC, the deck will automatically start recording the next time you turn the deck on.
   • If you do not change the deck to standby status for more than two or three days after timer recording has finished, the recorded contents may disappear.

Make sure to change the deck to standby status within two or three days after timer recording is completed
The TOC on the MD is updated and recorded contents are written to the MD when you turn the deck on. If the recorded contents have disappeared, “STANDBY” flashes when you turn the deck on.

Notes
• During timer recording, new material is recorded from the end of the recorded portion on the MD.
• Material recorded during timer recording will be saved to the disc the next time you turn the deck on. “TOC” will flash in the display at that time. Do not move the deck or pull out the AC power cord while “TOC” is flashing.
• Timer recording will stop if the disc becomes full.
For basic playback operations, see page 6.

Using the Display

You can use the display to check disc and track information such as the total track number, total playing time of the tracks, remaining recordable time of the disc, disc name, and recording date and time of the current track.

Checking the total track number, total disc playing time, remaining recordable time of the disc and the title of the disc

Each time you press DISPLAY while the deck is stopped, you can change the display as follows:

When you insert an MD, the disc name, total number of tracks, and total disc playing time appear in the display as follows:

```
Disc name           Music calendar
SONGS

Total number of tracks          Total disc playing time
15 Tr  68 m 07 s
```

The disc name appears, followed by the total number of tracks (Tr) and total disc playing time.
A music calendar showing all the track numbers appears within a grid if the MD is a premastered disc, or without a grid if the MD is a recordable disc.
If the total track number exceeds 25, ▶ appears to the right of number 25 in the music calendar.
To label a recordable disc and its tracks, see "Labeling Recordings" on page 28.
Checking remaining time and the title of a track

Each time you press DISPLAY while playing an MD, you can change the display as shown below. The track numbers in the music calendar disappear after they are played.

Displaying the recording date

When the internal clock has been set, the deck automatically records the recording date and time of all recordings. You can then check the recording date and time of a track.

1. Locate the track for which you want to check the recording date and time.

<table>
<thead>
<tr>
<th>When the deck is</th>
<th>Press</th>
</tr>
</thead>
<tbody>
<tr>
<td>stopped</td>
<td>⬠ or ⬡</td>
</tr>
<tr>
<td>playing in pause</td>
<td>⬠, ⬢ or number buttons</td>
</tr>
</tbody>
</table>

2. Press DATE RECORDED.

   “No Date” appears if the internal clock has not been set or the track was recorded on another MD deck without a date and time stamp function.

You can check the track name at any time while playing an MD by pressing SCROLL.

Since the display shows up to 12 characters at a time, press SCROLL on the remote again to see the rest of the track title if the title has 13 characters or more.

Press SCROLL again to pause scrolling, and again to continue scrolling.
Locating a Specific Track

You can quickly locate any track while playing a disc by using AMS (Automatic Music Sensor), << and >>, number buttons or M.SCAN on the remote.

1. To locate a track
   - The next or succeeding tracks: During playback, turn AMS clockwise or press >> repeatedly until you find the track.
   - The current or preceding tracks: During playback, turn AMS counterclockwise or press << repeatedly until you find the track.
   - A specific track directly: Press number buttons to enter the track number.
   - By scanning each track: Press M.SCAN before you start playing.
     1. Press M.SCAN before you start playing.
     2. When you find the track you want, press >> to start playing.

Tips
- When you directly locate a track with a number over 25
  You must press >25 first, before entering the corresponding digits.
  Press >25 once if it is a 2-digit track number, and twice if it is a 3-digit track number.
  To enter "0," press button 10.
  Examples:
  - To play track number 30
    Press >25 once, then 3 and 10.
  - To play track number 100
    Press >25 twice, then 1, 10 and 10.

- You can extend the playing time during music scan ▶️
  While the deck is stopped, press M.SCAN repeatedly until the playing time you want (6, 10 or 20 seconds) appears in the display. Each press changes the time in order of 6 to 20, then from 6 again.

- To pause playing at the beginning of a track
  Turn AMS (or press << or >>) after pausing playback.

To go quickly to the beginning of the last track
Turn AMS counterclockwise (or press <<) while the display shows the total track number and total disc playing time, remaining recordable time of the disc, or disc name (see page 17).

Locating a Particular Point in a Track

You can also use << and >> to locate a particular point in a track during playback or playback pause.

### To locate a point

#### Press

<table>
<thead>
<tr>
<th>While monitoring the sound</th>
<th>(forward) or (backward) and keep pressing until you find the point</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quickly by observing the display during playback pause</td>
<td>or and keep pressing until you find the point. There is no sound output during this operation</td>
</tr>
</tbody>
</table>

Notes
- If the disc reaches the end while you are pressing during playback pause, "OVER" appears in the display. Press (or <<) or turn AMS counterclockwise to go back.
- If the disc reaches the end while you are pressing during sound monitoring, the deck stops.
- Tracks that are only a few seconds long may be too short to scan using the search function. For such tracks, it is better to play the MD at normal speed.
Playing Tracks Repeatedly

You can play tracks repeatedly in any play mode.

Press REPEAT.
“REPEAT” appears in the display. The deck repeats the tracks as follows:

<table>
<thead>
<tr>
<th>When the MD is played in</th>
<th>The deck repeats</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal play (page 6)</td>
<td>All the tracks</td>
</tr>
<tr>
<td>Shuffle Play (page 21)</td>
<td>All the tracks in random order</td>
</tr>
<tr>
<td>Program Play (page 21)</td>
<td>The same program</td>
</tr>
</tbody>
</table>

To cancel repeat play
Press REPEAT several times until “REPEAT” disappears. The deck returns to the original playing mode.

Repeating the current track
While the track you want to repeat is playing in normal play, press REPEAT several times until “REPEAT 1” appears in the display.

Repeating a specific portion (A-B Repeat)
You can play a specific portion of a track repeatedly. This might be useful when you want to memorize lyrics.
Note that you can only repeat a portion within the boundaries of a single track.

1. While playing a disc, press A-B at the starting point (point A) of the portion to be played repeatedly. “REPEAT A-B” flashes in the display.

2. Continue playing the track or press ▶ until you reach the ending point (point B), then press A-B again.
“REPEAT A-B” lights continuously. The deck starts to play the specified portion repeatedly.

To cancel A-B Repeat
Press REPEAT.

Setting new starting and ending points
You can repeat the portion immediately after the currently specified portion by changing the starting and ending points.
1. Press A-B while “REPEAT A-B” appears.
The current ending point B becomes the new starting point A and “REPEAT A-B” flashes in the display.
2. Continue playing the track or press ▶ until you reach the new ending point (point B), then press A-B again.
“REPEAT A-B” lights continuously and the deck starts playing repeatedly the newly specified portion.
Playing in Random Order (Shuffle Play)

You can have the deck "shuffle" tracks and play them in random order.

1. Press PLAY MODE repeatedly (or SHUFFLE once) until "SHUFFLE" appears in the display when the deck is stopped.

2. Press to start Shuffle Play. "E" appears in the display while the deck is "shuffling" the tracks.

To cancel Shuffle Play
Press PLAY MODE repeatedly (or CONTINUE once) until "SHUFFLE" disappears.

 чувство You can specify tracks during Shuffle Play
• To play the next track, turn AMS clockwise (or press )
• To play from the beginning of the current track again, turn AMS counterclockwise (or press ). You cannot use AMS (or ) to go to tracks that have already been played.

Creating Your Own Program (Program Play)

You can specify the playback order of the tracks on an MD and create your own programs containing up to 25 tracks.

1. Press PLAY MODE repeatedly (or PROGRAM once) until "PROGRAM" appears in the display when the deck is stopped.

2. Do either a) or b):
   a) When using the remote
      Press the number buttons to enter the tracks you want to program in the order you want.
      To program a track with a number over 25, use the >25 button (see page 19).

   If you've made a mistake
   Press CLEAR, then press the right number button.

   b) When using the controls on the deck
      1. Turn AMS until the track number you want appears in the display.
      2. Press AMS or PLAY MODE.

3. Repeat Step 2 to enter other tracks. Each time you enter a track, the total program time is added up and appears in the display.

4. Press to start Program Play.

To cancel Program Play
Press PLAY MODE repeatedly (or CONTINUE once) when the deck is stopped until "PROGRAM" disappears.
You can program the same track repeatedly
While the track number appears in the display, press AMS as many times as you want.

The program remains even after Program Play ends
When you press ▶, you can play the same program again.

Note
The display shows "- -m - -s" instead of the total playing time when the total playing time of the program exceeds 100 minutes.

Checking the track order
You can check the order of tracks in your program during playback or playback pause.

Turn AMS (or press ◄◄ or ►►) during playback or playback pause. The track numbers appear in the order they were programmed.

Changing the track order
You can change the order of the tracks in your program before you start playing.

<table>
<thead>
<tr>
<th>To</th>
<th>Do the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Erase the last track in the program</td>
<td>Press CLEAR. Each time you press the button, the last track will be cleared.</td>
</tr>
<tr>
<td>Add tracks to the end of the program</td>
<td>Do Steps 2 and 3 in “Creating Your Own Program.”</td>
</tr>
</tbody>
</table>
| Change the whole program completely | 1 Press ◄ while the deck is stopped.  
2 Do Steps 2 and 3 in “Creating Your Own Program.” |

Useful Tips When Recording From MDs to Tape

The Auto Space and Auto Pause Functions described in this section make recording from MDs to tape more easy.

Inserting blank spaces while recording to tape (Auto Space)
The Auto Space Function inserts a 3-second blank space between each track while recording from MDs to tapes, allowing you to use the AMS function during later playback.

Press A.SPACE repeatedly until “A.SPACE” appears in the display.

To cancel Auto Space
Press A.SPACE repeatedly until “A.SPACE” disappears.

Note
If the Auto Space Function is on while recording a selection containing multiple track numbers, (for example, a medley or symphony), blank spaces will be inserted within the selection whenever the track number changes.

Pausing after each track (Auto Pause)
When the Auto Pause Function is on, the deck pauses after playing each track. Auto Pause is convenient when recording single tracks or multiple, non-consecutive tracks.

Press A.SPACE repeatedly until “A.PAUSE” appears in the display.

To restart playback
Press ▶ or ◄.

To cancel Auto Pause
Press A.SPACE repeatedly until “A.PAUSE” disappears.
Playing an MD Using a Timer

By connecting a timer (not supplied) to the deck, you can start and stop playback operations at specified times. For further information on connecting the timer or setting the starting and ending times, refer to the instructions that came with the timer.

1. Do Steps 1 to 3 in "Playing an MD" on page 6.

2. Press PLAY MODE repeatedly (or one of the PLAY MODE buttons once) to select the play mode you want.
   
   To play only specific tracks, create a program (see page 21).

3. If you want to specify the time for the start of playback, go to Step 4.
   
   If you want to specify the time for the end of playback, press \( \rightarrow \) to start playback, then go to Step 4.
   
   If you want to specify the time for both start and end of playback, go to Step 4.

4. Set TIMER on the deck to PLAY.

5. Set the timer as required.
   
   When you have set the time for the start of playback, the deck turns off. When the specified time arrives, the deck turns on and starts playing.
   
   When you have set the time for the end of playback, playback continues. When the specified time arrives, the deck stops playing and turns off.
   
   When you have set the time for both the start and end of playback, the deck turns off. When the starting time arrives, the deck turns on and starts playing. When the ending time arrives, the deck stops playing and turns off.

6. After you have finished using the timer, set TIMER on the deck to OFF.

Note

You can select Program Play in Step 2. Note, however, that programs eventually fade away when the standby status is off, and therefore if you set the time too far in the future, the program may be gone when the specified time arrives. If this has occurred, the deck enters normal play mode at the specified time and the tracks play in consecutive order.
Notes on Editing

If "Protected" appears in the display
The deck could not erase the specified track because the record-protect slot on the MD is open. Erase the track after closing the slot.

When "TOC" flashes in the display
Do not move the deck or pull out the AC power cord. After editing, "TOC" lights continuously until you eject the MD or turn off the power. "TOC" flashes while the deck is updating the TOC. When the deck finishes updating the TOC, "TOC" goes off.

Erasing Recordings (Erase Function)

Do the procedures below to erase following:
• A single track
• All tracks
• Parts of a track

Note, however, that once erased, MD data cannot be recovered.

1 Turn AMS until the track number you want to erase appears in the display.
2 Press EDIT/NO repeatedly until "Erase ?" appears in the display.
The track number you selected starts flashing in the music calendar.
3 Press YES.
When the track selected in Step 1 has been erased, "Complete" appears for a few seconds and the total number of tracks in the music calendar decreases by one.
If you erase a track during playback, the track following the deleted track begins playing afterwards.
4 Repeat Steps 1 to 3 to erase more tracks.

To cancel the Erase Function
Press EDIT/NO or turn AMS to change the track number.

Note
If "Erase!! ?" appears in the display, the track was recorded or edited on another MD deck and is record-protected. If this indication appears, press YES to erase the track.

Erasing all tracks on an MD
Erasing a recordable MD deletes the disc name, all recorded tracks, and titles (see page 29).

1 While the deck is stopped, press EDIT/NO repeatedly until "All Erase ?" appears in the display.
2 Press YES.
All tracks in the music calendar start flashing.
3 Press YES again.
When the disc name, all recorded tracks, and titles on the MD have been erased, "Complete" appears for a few seconds and the music calendar disappears.

To cancel the Erase Function
Press EDIT/NO or .

Example: Erasing B

<table>
<thead>
<tr>
<th>Track number</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Erasing</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B is erased</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A</td>
<td>B</td>
<td>C</td>
<td>D</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A</td>
<td>C</td>
<td>D</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Erasing a part of a track
By using the Divide (see this page), Erase (see page 24) and Combine (see page 26) Functions, you can erase specific portions of a track.

Example: Erasing a part of track A

Dividing Recorded Tracks (Divide Function)

With the Divide Function you can assign a track number at places that you want to randomly access afterwards. Use this function to add tracks to MDs recorded from an analog source (and therefore contain no track numbers), or to divide an existing track into multiple portions. When you divide a track, the total number of tracks on the MD increases by one and all tracks following the divided track are renumbered.

Example: Dividing track 2 to create a new track for C

1. While playing the MD, press II at the point where you want to create a new track. The deck pauses playing.
2. Press EDIT/NO repeatedly until “Divide?” appears in the display.
3. Press YES to divide the track. “Rehearsal” alternates with “Position ok?” in the display, the track to be divided starts flashing in the music calendar, and the starting portion of the new track begins playing repeatedly.
4. If the starting position is incorrect, press EDIT/NO. (If it is correct, go to Step 7.)

(Continued)
Labeling Recordings (Title Function)

You can create titles for your recorded MDs and tracks. Titles — which may consist of uppercase and lowercase letters, numbers and symbols for a maximum of about 1,700 characters per disc — appear in the display during MD operation.

Use the following procedure to label a track or an MD. You can label a track while it is playing, pausing or recording. If the track is playing, be sure to finish labeling before the track ends. If the track ends before you've completed the labeling procedure, the characters already entered are not recorded and the track will remain unlabeled.

1 Press EDIT/NO repeatedly until “Name in?” appears in the display, then do the following:

<table>
<thead>
<tr>
<th>To label</th>
<th>Make sure that the deck is</th>
</tr>
</thead>
<tbody>
<tr>
<td>A track</td>
<td>Playing, pausing, recording the track to be labeled, or stopped after locating the track to be labeled</td>
</tr>
<tr>
<td>An MD</td>
<td>Stopped with no track number appearing in the display</td>
</tr>
</tbody>
</table>

2 Press YES.
A flashing cursor appears in the display.

3 Turn AMS to select the first character.

The selected character flashes.
Letters, numbers, and symbols appear in sequential order as you turn AMS.
You can use the following symbols in titles:
! "$ % & ' () * + , - . / ; : < = > ? @ _ ^
Labeling tracks and MDs with the remote

1 Press NAME repeatedly until a flashing cursor appears in the display, then do the following:

<table>
<thead>
<tr>
<th>To label</th>
<th>Make sure that the deck is</th>
</tr>
</thead>
<tbody>
<tr>
<td>A track</td>
<td>Playing, pausing, recording the track to be labeled, or stopped after locating the track to be labeled</td>
</tr>
<tr>
<td>An MD</td>
<td>Stopped with no track number appearing in the display</td>
</tr>
</tbody>
</table>

2 Select the character type as follows:

<table>
<thead>
<tr>
<th>To select</th>
<th>Press</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lowercase letters</td>
<td>CAPS repeatedly until “Selected abc” appears in the display</td>
</tr>
<tr>
<td>Uppercase letters</td>
<td>CAPS repeatedly until “Selected ABC” appears in the display</td>
</tr>
<tr>
<td>Numbers</td>
<td>NUM repeatedly until “Selected 123” appears in the display</td>
</tr>
</tbody>
</table>

3 Enter one character at a time.

After you enter a character, the cursor shifts rightward and waits for the input of the next character.

4 Repeat Steps 2 and 3 until you have entered the entire title.

If you entered the wrong character

Press ◄ or ► until the character to be corrected starts flashing.
Press CLEAR to erase the incorrect character, then enter the correct one.

5 Press NAME again.

The entered title appears on the left side of the display window after the label has been recorded.

Changing an existing title

1 Press NAME, then do the following:

<table>
<thead>
<tr>
<th>To change</th>
<th>Make sure that the deck is</th>
</tr>
</thead>
<tbody>
<tr>
<td>A track title</td>
<td>Playing, pausing the track whose title is to be changed, or stopped after locating the track whose title is to be changed</td>
</tr>
<tr>
<td>A disc name</td>
<td>Stopped with no track number appearing in the display</td>
</tr>
</tbody>
</table>

2 Keep pressing CLEAR (or EDIT/NO on the deck) until the current title is erased.

3 Enter the new title.

Do Steps 3 to 5 of “Labeling Recordings” on page 28, or Steps 2 to 4 of “Labeling tracks and MDs with the remote” on this page.

4 Press NAME.

Erasing all titles on a disc (Name Erase Function)

Use this function to erase all titles on an MD simultaneously.

**Note that once erased, titles cannot be recovered.**

1 Keep pressing EDIT/NO while the deck is stopped until “All Erase ?” appears in the display.

2 Press EDIT/NO again.

“All Erase ?” appears in the display.

3 Press YES.

All titles are erased.

To cancel the Name Erase Function

Press ■.

You can erase all recorded tracks and titles

See “Erasing all tracks on an MD” on page 24.
Precautions

On safety
- The use of optical instruments with this product will increase eye hazard.
- Should any solid object or liquid fall into the cabinet, unplug the deck and have it checked by qualified personnel before operating it any further.

On power sources
- Before operating the deck, check that the operating voltage of the deck is identical with your local power supply. The operating voltage is indicated on the nameplate at the rear of the deck.
- If you are not going to use the deck for a long time, be sure to disconnect the deck from the wall outlet. To disconnect the AC power cord, grasp the plug itself; never pull the cord.

On operation
If the deck is brought directly from a cold to a warm location, or is placed in a very damp room, moisture may condense on the lenses inside the deck. Should this occur, the deck may not operate properly. In this case, remove the MD and leave the deck turned on for about an hour until the moisture evaporates.

On the MiniDisc cartridge
- Do not open the shutter to expose the MD.
- Do not place the cartridge where it will be subject to extremes of sunlight, temperature, moisture or dust.

On cleaning
Clean the cabinet, panel and controls with a soft cloth slightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzine.

If you have any questions or problems concerning your deck, please consult your nearest Sony dealer.

Display Messages

The following table explains the various messages that appear in the display.

<table>
<thead>
<tr>
<th>Message</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blank Disc</td>
<td>A new (blank) or erased MD has been inserted.</td>
</tr>
<tr>
<td>Cannot Copy</td>
<td>An attempt was made to make a second copy from a digitally dubbed MD (see page 33).</td>
</tr>
<tr>
<td>Cannot EDIT</td>
<td>An attempt was made to edit the MD during Program or Shuffle Play.</td>
</tr>
<tr>
<td>Disc Error</td>
<td>The MD is scratched or missing a TOC.</td>
</tr>
<tr>
<td>Disc Full</td>
<td>The MD is full (see “System Limitations” on page 31).</td>
</tr>
<tr>
<td>Impossible</td>
<td>An attempt was made to combine tracks while playing back the first track.</td>
</tr>
<tr>
<td>Name Full</td>
<td>The titling capacity of the MD has reached its limit (about 1,792 characters).</td>
</tr>
<tr>
<td>NO DISC</td>
<td>There is no MD in the deck.</td>
</tr>
<tr>
<td>No Track</td>
<td>The inserted MD has a disc title but no tracks.</td>
</tr>
<tr>
<td>Protected</td>
<td>The inserted MD is record-protected.</td>
</tr>
<tr>
<td>Retry</td>
<td>The first recording attempt failed due to a disturbance or scratch on the MD, and a second attempt is being made.</td>
</tr>
<tr>
<td>Retry Error</td>
<td>Due to vibrations to the deck or scratches on the MD, several recording attempts were made but with no success.</td>
</tr>
<tr>
<td>Sorry</td>
<td>An attempt was made to combine tracks that cannot be combined.</td>
</tr>
<tr>
<td>STANDBY (flashing)</td>
<td>The contents recorded by timer have disappeared over time and are not be available for saving to disc, or Program Play could not be activated since the program has disappeared over time.</td>
</tr>
</tbody>
</table>
System Limitations

The recording system in your MiniDisc deck is radically different from those used in cassette and DAT decks and is characterized by the limitations described below. Note, however, that these limitations are due to the inherent nature of the MD recording system itself and not to mechanical causes.

"Disc Full" lights up even before the MD has reached the maximum recording time (60 or 74 minutes)
When 255 tracks have been recorded on the MD, "Disc Full" lights up regardless of the total recorded time. More than 255 tracks cannot be recorded on the MD. To continue recording, erase unnecessary tracks or use another recordable MD.

"Disc Full" lights up before the maximum number of tracks is reached
Fluctuations in emphasis within tracks are sometimes interpreted as track intervals, incremenenting the track count and causing "Disc Full" to light up.

The remaining recording time does not increase even after erasing numerous short tracks
Tracks under 12 seconds in length are not counted and so erasing them may not lead to an increase in the recording time.

Some tracks cannot be combined with others
Track combination may become impossible when tracks are edited.

The total recorded time and the remaining time on the MD may not total the maximum recording time (60 or 74 minutes)
Recording is done in minimum units of 2 seconds each, no matter how short the material. The contents recorded may thus be shorter than the maximum recording capacity. Disc space may also be further reduced by scratches.

Tracks created through editing may exhibit sound dropout during search operations.

Track numbers are not recorded correctly
Incorrect assignment or recording of track numbers may result (1) when CD tracks are divided into several smaller tracks during digital recording, or (2) while recording certain CDAs with the "LEVEL SYNC" indication on (i.e., the automatic track marking function on).

"TOC Reading" appears for a long time
If the inserted recordable MD is brand new, "TOC Reading" appears in the display longer than for MDs that have been used.

Limitations when recording over an existing track
• The correct remaining recording time may not be displayed.
• You may find it impossible to record over a track if that track has been recorded over several times already. If this happens, erase the track using the Erase Function (see page 24).
• The remaining recording time may be shortened out of proportion to the total recorded time.
• Recording over a track to eliminate noise is not recommended since this may shorten the duration of the track.
• You may find it impossible to label a track while recording over it.

The correct recorded/playing time may not be displayed during playback of monaural-format MDs.

Troubleshooting

If you experience any of the following difficulties while using the deck, use this troubleshooting guide to help you remedy the problem. Should any problem persist, consult your nearest Sony dealer.

The deck does not operate or operates poorly.
➤ The MD may be damaged ("Disc Error" appears). Take the MD out and insert it again. If "Disc Error" remains, replace the MD.

The deck does not play back.
➤ Moisture has formed inside the deck. Take the MD out and leave the deck in a warm place for several hours until the moisture evaporates.
➤ The deck is not on. Press POWER to turn the deck on.
➤ The MD is inserted in the wrong direction. Slide the MD into the disc compartment with the label side up and the arrow pointing towards the opening until the deck grips it.
➤ The MD may not be recorded (the music calendar does not appear). Replace the disc with one that has been recorded.

(Continued)
The deck does not record.

- The MD is record-protected ("Protected" appears). Close the record-protect slot (see page 5).
- The deck is not connected properly to the sound source. Make connections properly to the sound source.
- The recording level is not adjusted properly (in case of input through LINE IN). Turn REC LEVEL to adjust the recording level properly (see page 12).
- A premastered MD is inserted. Replace it with a recordable MD.
- There is not enough time left on the MD. Replace it with another recordable MD with fewer recorded tracks, or erase unnecessary tracks.
- There has been a power failure or the AC power cord has been disconnected during recording. Data recorded to that point may be lost. Repeat the recording procedure.

An incompletely inserted MD cannot be pulled out.

- The MD deck's self-lock system has gripped the MD. Insert the MD completely, then press EJECT.

The sound has a lot of static.

- Strong magnetism from a television or a similar device is interfering with operations. Move the deck away from the source of strong magnetism.

Note
If the deck does not operate properly even after you've attempted the prescribed remedies, turn off the power, then reinsert the plug into the power outlet.

### Specifications

#### MD deck section

- **System**: MiniDisc digital audio system
- **Disc**: MiniDisc
- **Laser**: Semiconductor laser (λ=780 nm)
- **Emission duration**: continuous
- **Laser output power**: Less than 44.6 µW
  - *This output is the value measured at a distance of 200 mm from the objective lens surface on the optical pick-up block with 7 mm aperture.
- **Laser diode properties**: Material: GaAlAs
- **Revolutions (CLV)**: 400 rpm to 900 rpm
- **Error correction**: Advanced Cross Interleave Reed Solomon Code (ACIRC)
- **Sampling frequency**: 44.1 kHz
- **Modulation system**: EFM (Eight-to-Fourteen Modulation)
- **Number of channels**: 2 stereo channels
- **Frequency response**: 5 to 20,000 Hz ±0.5 dB
- **Signal-to-noise ratio**: Over 102 dB (during playback)
- **Wow and flutter**: Below measurable limit

#### General

- **Power requirements**: 120V AC, 60 Hz
- **Power consumption**: 22 W
- **Dimensions (approx) (w/h/d)**: 430 x 125 x 345 mm (17 x 5 x 13 3/8 in.) incl. projecting parts
- **Mass (approx)**: 6.0 kg (13 lbs 4 oz)

#### Supplied accessories

- Audio connecting cords (2 phono plugs - 2 phono plugs) (2)
- Remote commander (remote) RM-D2M (1)
- Sony SUM-3 (NS) batteries (2)

#### Optional accessories

- Recordable MDs: MDW-60 (60 min), MDW-74 (74 min)
- Optical cable: POC-15A
- Coaxial digital connecting cable: VMC-10G
- U.S. and foreign patents licensed from Dolby Laboratories Licensing Corporation.

Design and specifications are subject to change without notice.
Guide to the Serial Copy Management System

This MD deck uses the Serial Copy Management System, which allows only first-generation digital copies to be made of premastered software via the deck's digital input jack. An outline of this system appears below:

1. You can record from digital program sources (CDs, DATs or premastered MDs) onto a DAT tape or recordable MD via digital input jack on the DAT or MD deck. You cannot, however, record from this recorded DAT tape or MD onto another DAT tape or recordable MD via the digital input jack on the DAT or MD deck.

2. You can record the digital input signal of a digital satellite broadcast onto a DAT tape or recordable MD via the digital input jack on the DAT or MD deck which is capable of handling a sampling frequency of 32 kHz or 48 kHz. You can then record the contents of this recorded DAT tape or MD (first-generation) onto another DAT tape or recordable MD via digital input jack on the DAT or MD deck to create a second-generation digital copy. Subsequent recording from the second-generation copy onto another recordable DAT tape or MD is possible only through the analog input jack on the DAT or MD deck. Note, however, that on some BS tuners, second-generation digital copying may not be possible.

- Digital input jack
- DAT deck or MD deck
3 You can record a DAT tape or MD recorded via the DAT or MD deck's analog input jack onto another DAT tape or MD via the DAT or MD deck's digital output jack. You cannot, however, make a second-generation DAT tape or MD copy via the DAT or MD deck’s digital output jack.

### Index

**A, B**
- A-B repeat 20
- AMS (Automatic Music Sensor) 19
- Audio connecting cord 7, 8, 32 to 34
- Auto cut 11
- Auto pause 22
- Auto space 22
